Upper Level

Welcome to Scottsdale!

Welcome to historic Scottsdale for the 2019 Annual Conference of the Prognostics and Health Management (PHM) Society. This marks the 11th year of the conference, and will attract greater participation and offer richer programs than ever before to continue our success story.

Scottsdale is a popular winter vacation mecca for entire North-America in the area of Arizona known as the "Valley of the Sun," and with a slogan of "The West's Most Western Town." A tiny farming community of 2,000 people covering only 1 square mile in 1951 north of Phoenix, Scottsdale has become a vibrant city of more than 200,000 residents encompassing nearly 200 square miles. Its many golf courses and resorts attract visitors from around the world. Art galleries abound amid the towering palm trees, purple shadowed mountains, and pastel landscapes. The city boasts more than 300 sunny days per year. The lively restaurants, nightclubs, and cultural and sporting events add a metropolitan touch, yet cowboy ranches and Indian reservations are a brief ride away. In addition to its booming tourism industry, Scottsdale has become a diverse high technology center and is becoming recognized as a leader in health care and medical research. It offers a vast array of recreational activities, including biking, hiking, white water rafting, horseback riding, and ballooning. The arts are flourishing in the city, which has its own symphony orchestra and more art showcases per capita than almost any other city in the world. The conference week also overlaps with the

"Fall Arizona Restaurant Week," which brings you the local savor and old favorites to you from over 100 participating restaurants.

The Scottsdale Resort at McCormick Ranch Scottsdale Arizona is at the Crossroads of Everything in Scottsdale. Beautifully reimagined to reflect the beauty, warmth and community spirit of the Sonoran Desert, the Scottsdale Resort at McCormick Ranch welcomes you to a secluded oasis. Where conversations flow and connections are made, you'll discover a AAA Four Diamond retreat for the senses. Celebrate the pampering indulgence of Luna Spa. Find inspiration throughout event venues. Savor the locally sourced creations of artisan chefs. Schedule a sunrise tee time on nearby McCormick Ranch Golf Course. Or, simply enjoy the sunshine in one of our poolside cabanas. However you wish to spend your days, your next unforgettable experience awaits just off the beaten path.

The program for the PHM 2019 Conference is rich with technical content and the events offer many opportunities to make and renew professional connections across the national and international PHM community. Please enjoy this program, but also be sure to step outside the conference venue and soak up the sights and sounds of Scottsdale and Phoenix, an area rich in western history and diversity. We hope you have an enjoyable and productive week with us in Scottsdale!

Wolfgang Fink and Ginger Shao
2019 Conference Co-Chairs

The Conference

The Prognostics and Health Management Society (PHM Society) welcomes you to its 11th annual international conference. As the Society's annual premier event, the 2019 PHM Conference brings together the global community of PHM experts from industry, academia, and government in diverse application areas, such as, but not limited to, unmanned systems, wind energy, oil and gas, aerospace, transportation, automotive, precision agriculture, commercial space, human health & performance, smart manufacturing, and industry AI. In addition to technical paper sessions, the conference features a workshop on Measurement and Evaluation for PHM in Manufacturing, invited expert panels on a plurality of critical issues and applications, a doctoral symposium, a dedicated poster session, Luminary and Keynote speakers, and tutorials free to all registrants. Leading companies and research institutions will exhibit their products and demonstrate their technologies during the event. A PHM Data Challenge will be carried out in parallel and the results will be presented during the conference. The PHM Society features also two, two-day intensive short courses (PHM Fundamentals and Analytics for PHM) before the start of the main conference. Several social events will round up the program by providing ample opportunities for participants to connect and network with colleagues, including a career fair, diversity & inclusion breakfast, and, for the first time, a Golf tournament "PHM goes PGA" at the end of the conference.

phmconference.org

The conference includes high-quality tutorials, and original contributions submitted as full-length papers and posters. All submissions are reviewed by up to four experts in the field based on the criteria of originality, significance, quality, and clarity. The conference proceedings are published on the web for unrestricted access by the global scholarly and applications community.

Lastly, the conference has taken pride in building up its industry-focused panel sessions over the last several years. Most conferences do an outstanding job highlighting cutting-edge technical research, yet fail to offer a healthy amount of contributions from industry leaders who cannot necessarily share their work through technical publications. Our conference does both! Our panel sessions have featured, and will continue to feature, PHM practitioners with real-world experience who share candid insight as to how PHM has impacted their organizations.

The PHM Society

For years, the field of PHM was represented under a variety of banners, including aerospace, reliability, failure analysis and prevention, mechanical engineering, and others. PHM is broader than any single field of study. The PHM Society was established to unite the diverse PHM community and to establish PHM as a legitimate scientific and engineering discipline that draws from electrical, mechanical, civil, and chemical engineering, computer and materials science, reliability, test and measurement, artificial intelligence, healthcare, physics, smart manufacturing, and economics. We invite you to establish PHM as a meta-discipline that synergizes these fields.

PHM Society membership is free and entitles you to full access to papers, tutorials and proceedings—join or update your profile today!

What Sets This Conference Apart from Other Events

A major differentiator for the PHM Society is its contemporary approach toward copyright: the Society does not take ownership of your work! Instead, authors retain copyright through a Creative Commons License while allowing the PHM Society to distribute their work broadly through modern media at no cost to the authors. As a result, your original articles will reach the entire world for free and without access restrictions.

Sincere appreciation to the sponsors of this brochure!

Optional PHM Fundamentals Short Course Details and Agenda

September 21 – 22, Location: Arizona II

Separate Registration Required

Course Leaders: Dr. George Vachtsevanos (Georgia Tech) and Dr. Karl Reichard (Pennsylvania State University)

Course Administrator: Jeff Bird (TECNos)

This introductory course will be taught by recognized international experts in the PHM field and will cover the current state of the art in PHM technologies, sensors and sensing strategies, data mining tools, CBM+ technologies, novel diagnostic and prognostic algorithms as well as a diverse array of application examples/case studies. It is addressed to engineers, scientists, operations managers, educators, small business principals and system designers interested to learn how these emerging technologies can impact their work environment. Through a lecture (with Q&A), networking and workshop format with specialist experts, you will:

1. Establish a baseline for defining the extent and capabilities of PHM, specifically needs and organization
2. Identify specific details of PHM Applications (metrics, sensors, cost benefits, reliability) and PHM Methods (diagnostics, prognostics, data driven methods and uncertainty)
3. Identify issues and needs and a way forward including Continuing Professional Development
4. Examine case studies of PHM applications across diverse domains to identify solutions and impacts
5. Plan a PHM application in two mini workshop settings with expert group leaders

Topics Include:

- Introduction to PHM (Taxonomy, scope, basics, standards- for all talks)
- Deriving Requirements for PHM (Basics and illustrative examples)
- PHM Performance Metrics (Basics and illustrative examples)
- Diagnostics Methods (Basics and illustrative examples)
- *Case Study for requirements/metrics (Description of an application)*
- Prognostics (Basics and illustrative examples including uncertainty)
- Data Analytics Methods (Basics and illustrative examples)
- *Prognostics Case Studies (2 case studies for prognosis and data analytics information)*
- Sensors & Data Processing (Available/Required data and organization)
- *Analysis mini workshop (Small group data design activity with worksheets)*
- CBM+ and IVHM Technologies (Basics and illustrative examples)
- PHM Management Cost Benefit Analysis (Basics with cost Benefits, examples)
- Plenary- Issues and Needs (Review to compile collected issues from all participants)
- Reliability and Life Cycle Management (Linking reliability and PHM approaches)
- *Case Study Workshop Introduction (Small group activity builds on data design mini)*
- Fielded Systems Case Studies-1 (2 case studies for CBM and Reliability)
- Fielded Systems Case Studies-2 (3rd case study for CBA)
- *Case Study Mini workshop (Small group activity and reporting)*
- Way forward (Paths, Resources, Continuing Professional Development)

Saturday, September 21, 2019

8:00 – 10:00	Session 1: Welcome and Introductions Introduction to PHM Deriving Requirements for PHM PHM Performance Metrics
10:00 – 10:15	Break
10:15 – 12:00	Session 2: Diagnostics Methods Diagnostics Case Studies
12:00 – 1:00	Lunch (provided)

Optional PHM Data Analytics Short Course Details and Agenda

September 21 – 22, Location: Arizona III

Separate Registration Required

Course Leader: Dr. Neil Eklund (Analamot)

Course Administrator: Jeff Bird (TECNos)

This course is intended for engineers, scientists, and managers who are interested in data driven methods for asset health management. You will learn how to identify potential data driven projects, visualize data, screen data, construct and select appropriate features, build models of assets from data, evaluate and select models, and deploy asset monitoring systems. By the end of the course, you will have learned the essential skills of processing, manipulating and analyzing data of various types, creating advanced visualizations, detecting anomalous behavior, diagnosing faults, and estimating remaining useful life. Note that this course is an advanced course with only a brief, high-level overview of PHM presented - students are expected to know the basics of PHM already. New practitioners are encouraged to take the fundamentals course or contact the course leader to examine their background and skills.

The course is about two thirds lecture, and an optional one third hands-on lab. Students who elect to take the lab will be expected to bring a laptop with analytics software (R, Python, Matlab, or something similar) that they are familiar with pre-installed. Lab example solutions will be presented in Python.

Topics Include:

- Overview of Data-driven PHM
- Review of Fundamental Statistics
- Data Visualization
- Machine Learning – Introduction and Concepts
- Data Transformation & Feature Extraction
- Classification
- Regression
- Introduction to Neural Networks
- *Hands-on Lab*
- Feature Selection
- Characterizing Performance
- Model Selection
- Anomaly Detection
- Deep Learning I
- Deep Learning II
- Applications
- Practical Matters
- *Hands-on Lab*

Saturday, September 21, 2019

8:00 – 10:00	Session 1: Welcome and Introductions Overview of Data-driven PHM Review of Basic Statistics Exploratory Data Analysis
10:00 – 10:15	Break
10:15 – 12:00	Session 2: Machine Learning—Introduction and Concepts Data Transformation and Feature Extraction Classification
12:00 – 1:00	Lunch (provided)
1:00 – 3:15	Session 3: Regression
3:15 – 3:30	Break
3:30 – 5:30	Session 4: Hands-on Lab
7:30 – ?	Non-hosted dinner with all participants

Sunday, September 22, 2019

8:30 – 10:00	Session 5: Feature Selection Characterizing Performance
10:00 – 10:15	Break
10:15 – 12:00	Session 6: Model Selection Anomaly Detection
12:00 – 1:00	Lunch (provided)

PHM Applications Of Deep Learning Workshop

Monday, 12:30 – 4:30, Location: Arizona II & III
Workshop Leader: *Dr. Neil Eklund (Anatom)*

Deep learning has recently achieved significant breakthroughs in many different domains, including computer vision, language processing, genomics, and speech recognition; e.g., AlphaGo and AlphaZero have achieved super-human performance in complex games without human input. Despite these encouraging results, these techniques have seen little adoption by industry for PHM applications. There are several obstacles that need to be surmounted to enable the broad adoption of deep learning for PHM:

- Limited number of representative training samples, particularly for different types of faulty conditions and representative time-to-failure trajectories
- Appropriate benchmark datasets to compare the progress of newly developed algorithms
- Variability of operating and environmental conditions to appropriately transfer the learnt patterns between different operating conditions
- Heterogeneity of condition monitoring signals, system configurations, and operating conditions

This half-day workshop on the afternoon of 23 September will provide a forum for PHM researchers and practitioners to discuss the potential, applicability, benefits, challenges, and current obstacles of deep learning for PHM applications. The focus will be on theory and application of deep learning to anomaly detection, condition monitoring, diagnostics, and prognostics.

Measurement and Evaluation for PHM in Manufacturing (ME4PHM) Workshop

Monday, 7:00 – 4:30, Location: Arizona I

Workshop Leaders: *Brian A. Weiss (NIST)* and *Michael Brundage (NIST)*

This heavily discussion-based event will feature panel presentations and discussions from industry, government, and academia operating/focused in advancing monitoring, diagnostic, and prognostic (collectively known as prognostic and health management (PHM)) capabilities within manufacturing operations with a specific emphasis on how PHM technologies are evaluated. Participants (and expected audience members) will offer a diverse cross-section of technology developers, integrators, end-users/manufacturers (from small to large), and researchers to discuss what is working well, common challenges that need to be addressed, where the community's priorities should be focused, and how technological adoption can be sped in a cost-effective manner.

It is envisioned that this event will be documented in a resultant report that will present the best practices, lessons learned, challenges, and needs in measuring, verifying, and validating PHM technologies applicable to or active in manufacturing.

BENEFITS OF PARTICIPATION

- Hear from other industry professionals (including personnel from large and small manufacturers) about their challenges, needs, and best practices to measure the performance of monitoring, diagnostic, and prognostic technologies
- Understand what technologies are actively being developed and integrated to enhance your ability measure monitoring, diagnostic, and prognostic solutions
- Learn the latest measurement techniques that can be applied within your own manufacturing environments
- Builds upon the success of the 2018 Industry Forum: Monitoring, Diagnostics, and Prognostics for Manufacturing Operations that was documented in a publicly-available report.

Monday, September 23, 2019

7:00 – 8:00	Breakfast (provided)
8:00 – 8:15	Welcome/Introduction Brian Weiss and Michael Brundage (NIST)
8:15 – 9:40	Large Manufacturing – Challenges, Needs, and Best Practices to Verify and Validate PHM Technologies Sarah Lukens (General Electric); Greg Colvin (Honeywell); TBD (Foxconn); Nicholas Propes (Seagate); and Maria Seale (U.S. Army ERDC); TBD (Collins Aerospace)
9:40 – 9:55	Break
9:55 – 11:15	Small Manufacturing – Challenges, Needs, and Best Practices to Verify and Validate PHM Technologies Radu Pavel (TechSolve); Sara Fuller (Mississippi State); Brad Smith (Ludowici); and Luis Gonzalez-Mendez (Trividia Health)
11:15 – 12:30	Lunch on your own
12:30 – 2:00	Technology Development & Integration – Emergent PHM and the Capabilities that must be Assessed David Siegel (Predictronic); Mark Walker (D2K Technologies); Ed Spence (Machine Instrumentation); Frank Zahiri (U.S. Air Force Sustainment Center); and Sankaran Mahadevan (Vanderbilt University)
2:00 – 2:15	Break
2:15 – 3:40	Measurement and Evaluation Research – Developing Independent V&V of PHM Brian Weiss (NIST); Michael Brundage (NIST); Michael Sharp (NIST); and Doug Thomas (NIST)
3:40 – 4:10	Assessment of Different Industrial AI Techniques for PHM Xiondong 'Alex' Jia (University of Cincinnati)
4:10 – 4:30	Wrap-up

Doctoral Symposium

Monday, 8:00 – 5:00, Location: Pueblo I & II

Symposium Chairs: *Jamie Coble (University of Tennessee, Knoxville)* and *Felipe Viana (University of Central Florida)*

The Doctoral Symposium provides an opportunity for graduate students to present their research interests and plans at a formative stage in their research. The students will receive structured guidance from a panel of distinguished researchers as well as comments from conference participants and fellow students in a collegial setting. The PHM Society Doctoral Symposium will be held as a workshop on the first day of the conference. The panelists for the DS are:

- *Matteo Corbetta (NASA Ames Research Center)*
- *Felipe Parages (Uptake)*
- *Shawn Sheng (National Renewable Energy Laboratory)*
- *Felipe Viana (University of Central Florida)*

Social Program

Sponsor Exhibits

Throughout Conference, Location: Coronado IV & V

Opening Welcome Reception with Cocktails

Monday, 5:30 – 7:30, Location: Bennie's Courtyard

Cocktail Reception with Posters

Tuesday, 5:30 – 8:00, Location: Coronado I – III

Student Social Pool Event

Tuesday, 8:00 – 10:00, Location: McCormick Hotel pool-side

Network with the PHM community students in a relaxing atmosphere by the pool. A perfect evening to socialise and enjoy food and refreshments from the hotel pool bar & grill. Pool facilities will stay open, so don't forget your swim suit!

PHM Conference 11th Anniversary Banquet

Wednesday, 6:00 – 10:00, Location: Botanical Gardens
(for guest tickets, please see Registration Desk)

Diversity Outreach Breakfast

Thursday, 7:00 – 8:00, Location: Coronado I – III

Did you know that PHMS has recently committed to a Diversity Statement? Join a distinguished panel of PHM experts for a discussion on Inclusion and take a closer look at how PHMS can foster an inclusive environment so all individuals can contribute their best to the success of the PHM field.

This is a chance for your voice to be heard and YOU can help shape the inclusive community of PHMS. A full breakfast will be served, so come early!

Mobile App

The PHM Conference will be using the Whova mobile app this year. Easily access the most up-to-date agenda information, read full PDF versions of all papers, connect with other attendees, and much more using the free app on your phone or tablet. Get "Whova" from the App Store or Google Play and sign in with your e-mail account. Search for the PHM2019 event and, if prompted, use passcode **phmsociety**.

Doctoral Symposium Agenda

Monday, September 23, 2019

8:00 – 9:15	Breakfast (provided for participants and panelists)
9:15 – 9:30	Doctoral Symposium Welcome
9:30 – 10:00	Presentation #1 (10 min) <i>A Physics-based Deep Learning Technique for Prognostics</i> – Khaled Akkad (University of Illinois–Chicago) Panelist Feedback / Audience Q&A
10:00 – 10:30	Presentation #2 (10 min) <i>Vibration-based Condition Monitoring of Industrial Drivetrains Operating under Non-stationary Conditions</i> – Madhurjya Dev Choudhury (University of Auckland) Panelist Feedback / Audience Q&A
10:30 – 11:00	Break
11:00 – 11:30	Presentation #3 (10 min) <i>Methodology of Adaptive Prognostics and Health Management Using Streaming Data in Big Data Environment</i> – Jianshe Feng (University of Cincinnati) Panelist Feedback / Audience Q&A
11:30 – 12:00	Presentation #4 (10 min) <i>Multimodality Information Fusion for Aging Pipe Strength and Toughness Estimation Using Bayesian Networks</i> – Jie Chen (Arizona State University) Panelist Feedback / Audience Q&A
12:00 – 12:30	Presentation #5 (10 min) <i>Probabilistic Risk Assessment and Mitigation for UAS Safety and Traffic Management</i> – Jueming Hu (Arizona State University) Panelist Feedback / Audience Q&A
12:30 – 1:30	Lunch (provided for participants and panelists)
1:30 – 2:00	Presentation #6 (10 min) <i>Adapting Approximate Entropy as a Health Indicator of Rotating Machinery for Estimation of Remaining Useful Life</i> – Cody Walker (University of Tennessee) Panelist Feedback / Audience Q&A
2:00 – 2:30	Presentation #7 (10 min) <i>Novel Waveforms, Models, Algorithms for Cable Health Monitoring</i> – Xuan Wang (University of South Carolina) Panelist Feedback / Audience Q&A
2:30 – 3:00	Break
3:00 – 3:30	Presentation #8 (10 min) <i>Deep Learning Enable Diagnostics and Prognostics of Machine Health Condition</i> – Wo Jae Lee (Purdue University) Panelist Feedback / Audience Q&A
3:30 – 4:00	Presentation #9 (10 min) <i>A Framework for Resilience-Informed Decision-Making in Early Design</i> – Daniel Hulse (Oregon State University) Panelist Feedback / Audience Q&A
4:00 – 4:30	Presentation #10 (10 min) <i>A Framework to Interpret Deep Learning-Based Health Management System with Human Interactions</i> – Namkyoung Lee (University of Maryland) Panelist Feedback / Audience Q&A
4:30 – 4:45	Panelists Final Thoughts
4:45 – 5:00	Feedback from Students & Audience

Paper Session 1A: Real-time PHM and Deployment

Tuesday, 9:00 – 10:30, Room: Arizona II
Session Chair: Marcos Orchard (Universidad de Chile)
 Deployment of Prognostics to Optimize Aircraft Maintenance: A Literature Review – Jorben Pieter Sprong¹, Xiaoli Jiang², Henk Polinder³ (^{1,2,3}*Delft U. of Technology*)
 Prognostics As-A-Service: A Scalable Cloud Architecture for Prognostics – Jason Watkins¹, Christopher Teubert², John Ossenfort³ (^{1,3}*SGT, Inc., NASA Ames*; ²*NASA Ames*)
 A Methodology for the Experimental Validation of an Aircraft ECS Digital Twin Targeting System Level Diagnostics – Shafayat Hasan Chowdhury¹, Fakhre Ali², Ian K. Jennions³ (^{1,2,3}*Cranfield U.*)

Paper Session 1B: Diagnostics I

Tuesday, 9:00 – 10:30, Room: Arizona III
Session Chair: Nam-ho Kim (University of Florida)
 Bearing Condition Monitoring based on the Indicator Generated in Time-frequency Domain – Teng Wang¹, Zheng Liu², Guoliang Lu³ (^{1,2,3}*U. of British Columbia - Okanagan*; ³*Shandong U.*)
 Fault Detection of a Reusable Rocket Engine using Phase Plane Trajectory of Feature Vectors – Seiji Tsutsumi¹, Miki Hirabayashi², Daiwa Sato³, Masaharu Abe⁴, Kaname Kawatsu⁵, Masaki Sato⁶, Toshiya Kimura⁷, Tomoyuki Hashimoto⁸ (^{1,2,3,5,6,7,8}*JAXA*; ⁴*Ryoyu Systems*)
 Order Tracking Using Variational Mode Decomposition to Detect Gear Faults under Speed Fluctuations – Madhurjya Dev Choudhury¹, Liu Hong², Jaspreet Singh Dhupia³ (^{1,3}*U. of Auckland*; ²*Wuhan U. of Technology*)

Paper Session 1C: Prognostics I

Tuesday, 9:00 – 10:30, Room: Pueblo I & II
Session Chair: Ramin Moradi (University of Maryland)
 Wheel Bearing Fault Isolation and Prognosis Using Acoustic Based Approach – Jianshe Feng¹, Xinyu Du², Mutasim Salman³ (¹*U. of Cincinnati*; ^{2,3}*GM*)
 Physics-Informed Neural Networks for Corrosion-Fatigue Prognosis – Arinan Dourado¹, Felipe A. C. Viana² (^{1,2}*U. of Central Florida*)
 Multivariate Bernoulli Logit-Normal Model for Failure Prediction – Huijuan Shao¹, Xinwei Deng², Chi Zhang³, Shuai Zheng⁴, Hamed Khorasgani⁵, Ahmed Farahat⁶, Chetan Gupta⁷ (^{1,3,4,5,6,7}*Hitachi*; ²*Virginia Tech*)

Paper Session 2A: PHM Methods

Tuesday, 10:45 – 12:15, Room: Arizona II
Session Chair: Jose Celaya (Schlumberger)
 A Survey of Flight Anomaly Detection Methods: Challenges and Opportunities – Vivian Rowoli Igenewari¹, Zakwan Skaf², Ian K. Jennions³ (^{1,2,3}*Cranfield U.*)
 A Study on PHM Method Suitable for Motor-Driven Commercial Vehicle – Hong Suk Chang¹, Jong Chan Park² (^{1,2}*Hyundai*)
 Kinematic Frequencies of Rotating Equipment Identified with Sparse Coding and Dictionary Learning – Sergio Martin-del-Campo¹, Fredrik Sandin², Stephan Schnabel³ (^{1,2}*Luleå U. of Technology*; ³*SKF*)

Paper Session 2B: PHM Application - Wind Turbines

Tuesday, 10:45 – 12:15, Room: Arizona III
Session Chair: Aramis Perez (University of Costa Rica)
 Wind Turbine Main Bearing Fatigue Life Estimation with Physics-informed Neural Networks – Yigit Anil Yucesan¹, Felipe A. C. Viana² (^{1,2}*U. of Central Florida*)
 Adaptive Machine Learning Approach for Fault Prognostics based on Normal Conditions - Application to Shaft Bearings of Wind Turbine – Koceila Abid¹, Moamar Sayed-Mouchaweh², Comez Laurence³ (^{1,2}*IMT Lille Douai*; ³*CEA Tech*)
 A Diagnostic Framework for Wind Turbine Gearboxes Using Machine Learning – Sofia Koukoura¹, James Carroll², Alasdair McDonald³ (^{1,2,3}*U. of Strathclyde*)

Paper Session 2C: Anomaly Detection

Tuesday, 10:45 – 12:15, Room: Pueblo I & II
Session Chair: Jae Yoon (National Oilwell Varco)
 Isolation and Localization of Unknown Faults Using Neural Network-Based Residuals – Daniel Jung¹ (¹*Linkoping U.*)
 Automatic Indexation of Turbofan Data to Identify Anomalous Behaviors – Jerome Lacaille¹, Cynthia Faure², Madalina Olteanu³, Marie Cottrell⁴ (¹*Safran Aircraft Engines*; ^{2,3,4}*Université Paris 1, Panthéon-Sorbonne*)
 Data-Driven Detection of Anomalies and Cascading Failures in Traffic Networks – Sanchita Basak¹, Afiya Ayman², Aron Laszka³, Abhishek Dubey⁴, Bruno Leao⁵ (^{1,4}*Vanderbilt U.*; ^{2,3}*U. of Houston*; ⁵*Siemens*)

Invited Paper Session 3A: Blockchain in Control & Aerospace

Tuesday, 1:30 – 3:00, Location: Arizona II

Session Chair: Sandeep Gulati (Zyomed)

A Blockchain-Backed Registry for Health-Ready Components & Systems – **TBD (TBD)**
 Blockchains for IoT Transactional Integrity and Cybersecurity in High-Density Applications – **TBD (TBD)**
 A Consortium Digital Data Marketplace enabling AI development via Smart Contracts – **TBD (TBD)**

IJPHM Paper Session 3B: Deep Learning for Aviation

Tuesday, 1:30 – 3:00, Location: Arizona III
Session Chair: Neil Eklund (Analatom)
 TrajecNets: Online Failure Evolution Analysis in 2D Space – Nauman Shahid¹, Anarta Ghosh² (^{1,2}*United Technologies Research Center*)
 Fully Unsupervised Feature Alignment for Critical System Health Monitoring with Varied Operating Conditions – Gabriel Michau¹, Chetan Kulkarni², Kai Goebel³, Olga Fink² (^{1,4}*ETH Zurich*; ²*SGT, Inc., NASA Ames*; ³*Luleå U. of Technology*)
 Hybrid Deep Fault Detection and Isolation: Combining Deep Neural Networks and System Performance Models – Manuel Arias Chao¹, Olga Fink² (^{1,2}*ETH Zurich*)

Paper Session 3C: Data-Driven Prognostics I

Tuesday, 1:30 – 3:00, Room: Pueblo I & II
Session Chair: Wei zhong Yan (GE Global Research Center)
 A Novel Similarity-based Method for Remaining Useful Life Prediction Using Kernel Two Sample Test – Xiaodong Jia¹, Haoshu Cai², Yuanming Hsu³, Wenzhe Li⁴, Jianshe Feng⁵, Jay Lee⁶ (^{1,2,3,4,5,6}*U. of Cincinnati*)
 A Hybrid PSO-SVM Based Method for Degradation Process Prediction of Reciprocating Seal – Madhumitha Ramachandran¹, Jon Keegan², Zahed Siddique³ (^{1,2,3}*U. of Oklahoma*)
 Remaining Useful Life Prediction of Bearings with Ensemble Learning – Junchuan Shi¹, Kai Goebel², Dazhong Wu³ (^{1,3}*U. of Central Florida*; ²*PARC*)

Invited Paper Session 4A: Design Consideration for PHM

Tuesday, 3:15 – 4:45, Room: Arizona II
Session Chair: Ian Jennions (Cranfield University)
 Best Practices Framework for Improving Maintenance Data Quality to Enable Asset Performance Analytics – Sarah Lukens¹, Manjish Naik², Kittipong

Saetia³, Xiaohui Hu⁴ (^{1,2,3,4}*GE*)

Using Value Assessment to Drive PHM System Development in Early Design – Daniel Hulse¹, Christopher Hoyle², Kai Goebel³, Irem Tumer⁴ (^{1,2,4}*Oregon State U.*; ³*PARC*)
¹Ethics in Prognostics and Health Management – Kai Goebel¹, Brian Smith², Anupa Bajwa³ (¹*PARC, Luleå Technical U.*; ^{2,3}*NASA Ames*)

Paper Session 4B: Deep Learning Applications

Tuesday, 3:15 – 4:45, Room: Arizona III
Session Chair: Olga Fink (ETH Zürich)
 Multi-Source Domain Adaptation for Intelligent Fault Diagnosis of Rolling Element Bearings: A Novel Deep Generative Framework – Behnoush Rezaeianjouybari¹, Ahmed Sherif El-Gizawy² (^{1,2}*U. of Missouri*)
 Multi-label Prediction in Time Series Datasets Using Deep Neural Networks – Wenyu Zhang¹, Devesh K. Jha², Emil Laftchiev³, Daniel Nikovski⁴ (¹*Cornell U.*; ^{2,3,4}*Mitsubishi Electric Research Labs*)
 Evaluation of 1D CNN Autoencoders for Lithium-ion Battery Condition Assessment Using Synthetic Data – Christopher J. Valant¹, Jay D. Wheaton², Michael G. Thurston³, Sean P. McConky⁴, Nenad G. Nenadic⁵ (^{1,2,3,4,5}*RIT*)

Paper Session 4C: Predictive Maintenance

Tuesday, 3:15 – 4:45, Room: Pueblo I & II
Session Chair: Daniel Jung (Linkoping University)
 Automating Visual Inspection with Convolutional Neural Networks – Sreerupa Das¹, Christopher D Hollander², Suraiya Suliman³ (^{1,2,3}*Lockheed Martin*)
 Categorization Errors for Data Entry in Maintenance Work-Orders – Thurston Sexton¹, Melinda Hodkiewicz², Michael P. Brundage³ (^{1,3}*NIST*; ²*U. of Western Australia*)
 Agreement Behavior of Isolated Annotators for Maintenance Work-Order Data Mining – Emily Hastings¹, Thurston Sexton², Michael P. Brundage³, Melinda Hodkiewicz⁴ (¹*U. of Illinois*; ^{2,3}*NIST*; ⁴*U. of Western Australia*)

Paper Session 5A: Deep Networks for PHM
Wednesday, 9:00 – 10:30, Room: Arizona II
Session Chair: Gabriel Michau (ETH Zürich)

Rolling Element Bearing Fault Diagnosis Based on with Deep Belief Network and Principal Component Analysis – Guangxing Niu¹, Bin Zhang², Paul Ziehl³, Frank Ferrese⁴, Michael Golda⁵ (1,2,3U. of South Carolina; 4NSWC)
Health Monitoring Framework for Aircraft Engine System using Deep Neural Network – Hyunseong Lee¹, Guoyi Li², Ashwin Rai³, Aditi Chattopadhyay⁴ (1,2,3,4Arizona State U.)
The Anomaly Detection of 2.4L Diesel Engine Using One-Class SVM with Autoencoder – Gyeongbae Jang¹, Sung-bae Cho² (1,2Yonsei U.)

Paper Session 5B: Diagnostics II
Wednesday, 9:00 – 10:30, Room: Arizona III
Session Chair: Lou Zhang (MachineMetrics)

Automatic Fault Diagnosis System for Primary Flight Control Actuators – Oliver Ritter¹, Daniele Bruno², Rocco Gentile³, Francesco Marino⁴, Antonio Bertolino⁵, Andrea Raviola⁶, Giovanni Jacazio⁷, Massimo Sorli⁸ (1,2,3,4,5,6,7,8Politecnico di Torino)
Design and In-Water Testing of a Fault-Detection System for Unmanned Underwater Vehicle Actuators – Matt Kemp¹, Jon Erickson², Scott Jensen³, Sotiria Lampoudi⁴, Eric J. Martin⁵ (1,2,3,4,5Monterey Bay Aquarium Research Institute)
Permanent Magnet Synchronous Motor Winding Fault Simulation and Diagnosis – Enhui Liu¹, Guangxing Niu², Shijie Tang³, Bin Zhang⁴, Jesse Williams⁵, Rodney Martin⁶, Craig Moore⁷ (1,2,3,4U. of South Carolina; 5GTC; 6NASA Ames; 7NASA Marshall)

Paper Session 5C: Prognostics II
Wednesday, 9:00 – 10:30, Room: Pueblo I & II
Session Chair: Abhinav Saxena (GE Research)

A Prognostics Model to Predict Brake Rotor Thickness Variation – Hamed Kazemi¹, Xinyu Du², Samba Drame³, Regan Dixon⁴, Hossein Sadjadi⁵ (1,2,3,4,5GM)
Accurate Estimation of Battery SOH and RUL Based on a Progressive LSTM with a Time Compensated Entropy Index – Taejun Bak¹, Sukhan Lee² (1,2Sungkyunkwan U.)
Adversarial Campaign Mitigation via ROC-Centric Prognostics – Javier

Echaz¹, Keith Kenemer², Sarfaraz Hussein³, Jay Dhaliwal⁴, Saurabh Shintre⁵, Slawomir Grzonkowski⁶, Andrew Gardner⁷ (1,2,3,4,5,6,7Symantec)

Paper Session 6A: PHM Application - UAV
Wednesday, 10:45 – 12:15, Room: Arizona II
Session Chair: Nicholas Propes (NAVAIR)

Real time Diagnostics and Prognostics of UAV Lithium-Polymer Batteries – Nick Eleftheroglou¹, Dimitrios Zarouchas², Theodoros Loutas³, Sina Sharif Mansouri⁴, George Georgoulas⁵, Petros Karvelis⁶, George Nikolakopoulos⁷, Rinze Benedictus⁸ (1,2,8Delft U. of Technology; 3,5U. of Patras; 4,6,7Lulea U. of Technology)
An Approach for Uncertainty Quantification And Management Of Unmanned Aerial Vehicle Health – Matteo Corbetta¹, Chetan S. Kulkarni² (1,2SGT. Inc, NASA Ames)
Model-based On-board Decision Making for Autonomous Aircraft – Johann Martin Schumann¹, Nagabhushan Mahadevan², Michael Lowry³, Gabor Karsai⁴ (1SGT, Inc., NASA Ames; 2Vanderbilt U.; 3NASA Ames)

Paper Session 6B: Performance and Uncertainty
Wednesday, 10:45 – 12:15, Room: Arizona III
Session Chair: Rahul Soangra (Chapman University)

MCATSS - End-To-End Mobile Cardiopulmonary Tolerance Score System – Shravan Aras¹, Anh Dao², Chris Gniady³, Rinku Skaria⁴, Zain Khalpey⁵ (1,2,3,4,5U. of Arizona)
A Comparative Study on Computation of Cumulative Distribution Function in Predicting Time of Failure of Engineering Systems – Gina Katherine Sierra Paez¹, Matthew Daigle², Kai Goebel³ (1SGT, Inc., NASA Ames; 2NIO USA; 3PARC)
Development of Metrics for Resilience Quantification in Energy Systems – Felipe Sartori da Silva¹, José Alexandre Matelli² (1,2São Paulo State U.)

Paper Session 6C: Features and Information Fusion
Wednesday, 10:45 – 12:15, Room: Pueblo I & II
Session Chair: Sergio Martin (Lulea University of Technology)

Probabilistic Aging Pipe Strength Estimation Using Multimodality Information Fusion – Jie Chen¹, Yongming Liu² (1,2Arizona State U.)
Improved Fault Detection and Isolation of Small Faults using Multiple Residual Generators and Complex Detection Hypotheses: Case Study of an Electro-

Hydraulic Aerospace Actuator – Desham Mitra¹, Pulak Halder², Siddhartha Mukhopadhyay³ (1,3IIT Kharagpur; 2RCI)
Health Index Generation Based on Compressed Sensing and Logistic Regression for Remaining Useful Life Prediction – Christian Knoebel¹, Daniel Strommenger², Johannes Reuter³, Clemens Guehmann⁴ (1,3HTWG Konstanz; 2,4Technische U. Berlin)

Paper Session 7A: Data-driven Prognostics II
Wednesday, 1:30 – 3:00, Room: Arizona II
Session Chair: Chetan Kulkarni (SGT Inc. @ NASA Ames Research Center)

Operating Condition-Invariant Neural Network-based Prognostics Methods applied on Turbofan Aircraft Engines – Gabriel Duarte Pasa¹, Ivo Paixão de Medeiros², Takashi Yoneyama³ (1,2Embraer; 3Instituto Tecnológico de Aeronáutica)
Process-Monitoring-for- Quality -- A Model Selection Criterion for Shallow Neural Networks – Carlos A. Escobar¹, Ruben Morales-Menendez² (1GM; 2Tecnológico de Monterrey)
Semi-supervised Constrained Hidden Markov Model Using Multiple Sensors: for Remaining Useful Life Prediction and Optimal Predictive Maintenance – Xinyu Zhao¹, Yunyi Kang², Hao Yan³, Feng Ju⁴ (1,2,3,4Arizona State U.)

Invited Paper Session 7B: PHM for Human Health & Performance I
Wednesday, 1:30 – 3:00, Location: Arizona III
Session Chair: Thurmon Lockhart (Arizona State University)

Prediction Model of Postoperative Cardiac Surgical Outcomes using a Smartphone-based Preoperative Gait and Posture Measures – TBD (TBD)
Length of Time-Series Gait Data on Lyapunov Exponent – TBD (TBD)
Multimodal Wireless Wearable System for Age-Related Mobility Assessment and Fall Risk Prediction – TBD (TBD)

Invited Paper Session 7C: Data Challenge Winners
Wednesday, 1:30 – 3:00, Location: Pueblo I & II
Session Chair: Kurt Doughty (Collins Aerospace)

A Fatigue Crack Length Estimation and Prediction using Trans-fitting with Support Vector Regression – Myeongbaek Youn¹, Yunhan Kim², Dongki Lee³, Minki Cho⁴ (1,2Seoul National U.; 3,4LG Electronics)
A Hybrid Approach of Data-Driven and Physics-based Methods for Estimation and Prediction of Fatigue Crack Growth – Hyeon Bae Kong¹, Soo-Ho Jo²,

Joon Ha Jung³, Jong M. Ha⁴, Yong Chang Shin⁵, Heonjun Yoon⁶, Kyung Ho Sun⁷, Yun-Ho Seo⁸, Byung Chul Jeon⁹ (1,2,5,6Seoul National U.; 3,7,8Korea Institute of Machinery & Materials; 4Korea Research Institute of Standard and Science; 9Republic of Korea Air Force)
Ensemble Linear Regression and Paris' Law Based Methods for Structure Fatigue Crack Length Estimation and Prediction Using Ultrasonic Wave Data – Meng Rao¹, Xingkai Yang², Dongdong Wei³, Yuejian Chen⁴, Lijun Meng⁵, Ming J. Zuo⁶ (1,2,3,4,5,6U. of Alberta; 5Jiang Han U.)

Paper Session 8A: Optimization & Control for PHM
Wednesday, 3:15 – 4:45, Room: Arizona II
Session Chair: Bin Zhang (University of South Carolina)

Lifetime Model Development for Integration in Power Management of HEVs By Terms of Minimizing Fuel Consumption and Battery Degradation – Nejra Beganovic¹, Bedatri Moulik², Ahmed Mohamed Ali³, Dirk Soffker⁴ (1Mid-Sweden U.; 2Amity U.; 3,4U. of Duisburg-Essen)
A State-of-Health-Oriented Power Management Strategy for Multi-Source Electric Vehicles Considering Situation-Based Optimized Solutions in Real-Time – Ahmed Mohamed Ali¹, Bedatri Moulik², Nejra Beganovic³, Dirk Soffker⁴ (1,4U. of Duisburg-Essen; 2Amity U.; 3Mid-Sweden U.)
Progress towards a Framework for Aerospace Vehicle Reasoning (FAVER) – Cordelia Mattuvarukuzhali Ezhilarasu¹, Zakwan Skaf², Ian K Jennions³ (1,2,3Cranfield U.)

IJPHM Paper Session 8B: PHM for Human Health & Performance II
Wednesday, 3:15 – 4:45, Location: Arizona III
Session Chair: Wolfgang Fink (University of Arizona)

A Transfer Active Learning Framework to Predict Thermal Comfort – Annamalai Natarajan¹, Emil Laftchiev² (1Philips Research; 2Mitsubishi Electric Research Labs)
Dynamic Behavior of Cortisol and Cortisol Metabolites in Human Eccrine Sweat – J. Ray Runyon¹, Min Jia², Michael R. Goldstein³, Perry Skeath⁴, Leif Abrell⁵, Jon Chorover⁶, Esther M. Sternberg⁷ (1,2,3,4,5,6,7U. of Arizona)
Effects of Obesity and Fall Risk on Gait and Posture of Community-Dwelling Older Adults – Thurmon E. Lockhart¹, Christopher W. Frames², Rahul Soangra³, Abraham Lieberman⁴ (1,2Arizona State U.; 2,4Barrow Neurological Institute; 3Chapman U.)

Paper Session 9A: Gearbox Diagnostics

Thursday, 9:00 – 10:30, Room: Arizona II

Session Chair: Melinda Hodkiewicz (UWA)

A Comprehensive Analysis of the Performance of Gear Fault Detection Algorithms – Eric Bechhoefer¹, Brent Butterworth² (¹GPMS; ²Garmin International)

An Evaluation of Empirical Approach for Gearbox Diagnosis in the Construction Equipment – Keon Kim¹ (¹Doosan Infracore, Ltd)

Tooth Crack Severity Assessment in the Early Stage of Crack Propagation Using Gearbox Dynamic Model – Xingkai Yang¹, Ming J. Zuo², Zhigang (Will) Tian³ (^{1,2,3}U. of Alberta)

Paper Session 9B: Diagnostics III

Thursday, 9:00 – 10:30, Room: Arizona III

Session Chair: Felipe Viana (Uptake)

Fault Identification and Isolation in Dynamic Systems Using Multiple Models – Olivia Maria Alves Coelho¹, Wlamiar O. L. Vianna², Takashi Yoneyama³ (^{1,2}Embraer; ³Instituto Tecnológico de Aeronáutica)

Classification Based Diagnosis: Integrating Partial Knowledge of the Physical System – Ion Matei¹, Johan de Kleer², Alexander Feldman³, Maksym Zhenirovskyy⁴, Rahul Rai⁵ (^{1,2,3,4}PARC; ⁵U. at Buffalo - SUNY)

A Hybrid Qualitative and Quantitative Diagnosis Approach – Ion Matei¹, Maksym Zhenirovskyy², Johan de Kleer³, Alexander Feldman⁴ (^{1,2,3,4}PARC)

Paper Session 9C: Prognostics III

Thursday, 9:00 – 10:30, Room: Pueblo I & II

Session Chair: Matteo Corbetta (SGT Inc., NASA Ames Research Center)

Continuous Times Bayesian Networks in Prognosis and Health Management of Centrifugal Pumps – Tyler Forrester¹, Mark Harris², Jacob Senecal³, John Sheppard⁴ (^{1,2,3,4}Montana State U.)

A Prognostics Framework for Power Semiconductor IGBT Modules through Monitoring of the On-State Voltage – Nicolas Degrenne¹, Chihiro Kawahara², Stefan Mollov³ (^{1,2,3}MERCE)

¹Invited papers concurrently published in IJPHM (www.ijphm.org)

[†]TBD IJPHM Paper

Paper Session 10A: Structural Health Monitoring

Thursday, 10:45 – 12:15, Room: Arizona II

Session Chair: Xinyu Du (General Motors)

Chemometrics as a Tool to Gain Insight into Fiber Rope Aging from Infrared Images – Ellen Marie Nordgård-Hansen¹, Håkon Jarle Hassel², Rune Schlanbusch³ (^{1,3}NORCE; ²Idetechs)

Experimental Results of Acoustic Emission Attenuation Due to Wave Propagation in Composites – Sebastian Felix Wirtz¹, Stefan Bach², Dirk Söffker³ (^{1,2,3}U. Duisburg-Essen)

Isolation-based feature Selection for Unsupervised Outlier Detection – Qibo Yang¹, Jaskaran Singh², Jay Lee³ (^{1,2,3}U. of Cincinnati)

Paper Session 10B: PHM for Air Traffic Management

Thursday, 10:45 – 12:15, Room: Arizona III

Session Chair: Dirk Söffker (University of Duisburg-Essen)

A Survey of Flight Crew Procedural Deviation using Anomaly Detection – Vivian Rowoli Igenewari¹, Zakwan Skaf², Ian K. Jennions³ (^{1,2,3}Cranfield U.)

Risk-Based Dynamic Anisotropic Operational Safety Bound for Rotary UAV Traffic Control – Jueming Hu¹, Heinz Erzberger², Kai Goebel³, Yongming Liu⁴ (^{1,4}Arizona State U.; ²U. of California; ³Luleå Technical U.)

Spatio-temporal Anomaly Detection, Diagnostics, and Prediction of the Air-traffic Trajectory Deviation using the Convective Weather – Xinyu Zhao¹, Hao Yan², Jing Li³, Yutian Pang⁴, Yongming Liu⁵ (^{1,2,3,4,5}Arizona State U.)

Paper Session 10C: Accelerated Aging and Simulations

Thursday, 10:45 – 12:15, Room: Pueblo I & II

Session Chair: Jamie Coble (University Of Tennessee, Nuclear Engineering)

A Regularized Deep Clustering Method for Fault Trend Analysis – Yongzhi Qu¹, Yue Zhang², David He³, Miao He⁴, Dude Zhou⁵ (^{1,2,3,4,5}U. of Illinois at Chicago)

A Simulation Engine for the Characterization of Capacity Degradation Processes in Lithium-ion Batteries Undergoing Heterogeneous

Operating Conditions – Aramis Perez¹, Heraldo Rozas², Francisco Jaramillo³, Vanessa Quintero⁴, Marcos Orchard⁵ (^{1,2,3,5}U. of Chile; ⁴U. Tecnológico de Panama)

Performance of Photovoltaic Modules After an Accelerated Thermal Cycling Degradation Test – Aramis Perez¹, Luis Gabriel Marin², Fernando Fuentes³, Patricio Mendoza⁴, Guillermo Jimenez⁵, Marcos Orchard⁶ (^{1,3,4,6}U. of Chile; ²Cycle System; ⁵U. de Los Andes)

Paper Session 11A: System Level Health

Thursday, 1:30 – 3:00, Room: Arizona II

Session Chair: Shuangwen Sheng (National Renewable Energy Laboratory)

Advanced Fault-tolerant Control Strategy of Wind Turbine Based on Squirrel Cage Induction Generator with Rotor Bar Defects – Boubakeur Roubah¹, Houari Toubakh², Moamar Sayed-Mouchaweh³ (¹Ferhat Abbas U.; ²Kasdi Merbah U.; ³Mines-Douai)

Probabilistic Health and Mission Readiness Assessment at System-Level – Leonardo Barbini¹, Michael Borth² (^{1,2}TNO)

Introducing AnomDB: An Unsupervised Anomaly Detection Method for CNC Machine Control Data – Lou Zhang¹, Sarah Elghazoly², Brock Tweedie³ (^{1,2,3}MachineMetrics)

Paper Session 11B: Taxonomy and Knowledge Management for PHM

Thursday, 1:30 – 3:00, Room: Arizona III

Session Chair: Daniel Vissolo (Schlumberger)

Studies to Predict Maintenance Time Duration and Important Factors From Maintenance Workorder Data – Madhusudanan Navinchandran¹, Michael E. Sharp², Michael P. Brundage³, Thurston B. Sexton⁴ (^{1,2,3,4}NIST)

Towards an Enhanced Data- and Knowledge Management Capability: A Data Life Cycle Model Proposition for Integrated Vehicle Health Management. – Alexslis Maindze¹, Zakwan Skaf², Ian Jennions³ (^{1,2,3}Cranfield U.)

Data-driven Approach to Equipment Taxonomy Classification – Kittipong Saetia¹, Sarah Lukens², Erik Pijcke³, Xiaohui Hu⁴ (^{1,2,3,4}GE)

Paper Session 11C: PHM for Manufacturing

Thursday, 1:30 – 3:00, Room: Pueblo I & II

Session Chair: Shankar Sankararaman (Vanderbilt University)

A Deep Learning-Based Method for Cutting Parameter Optimization for Band Saw Machine – Pin Li¹, Jianshe Feng², Feng Zhu³, Hossein Davari⁴, Liang-Yu Chen⁵, Jay Lee⁶ (^{1,2,3,4,5,6}U. of Cincinnati)

Anomaly Detection and Diagnosis In Manufacturing Systems: A Comparative Study Of Statistical, Machine Learning And Deep Learning Techniques – Kalyani Zope¹, Kuldeep Singh², Sri Harsha Nistala³, Arghya Basak⁴, Pradeep Rathore⁵, Venkataramana Runkana⁶ (^{1,2,3,4,5,6}TCS)

Process Control Decision Inference, Monitoring, and Execution – Robert Matania¹, Jean-Marie Foret², Vicente Camarillo³, Mark Walker⁴ (^{1,2,3,4}D2K Technologies)

Paper Session 12A: Prediction Methods

Thursday, 3:15 – 4:45, Room: Arizona II

Session Chair: Guangxing Niu (University of South Carolina)

Probability of Detection (POD)-based Metric for Evaluation of Classifiers Used in Driving Behavior Prediction – Daniel Adofo Ameyaw¹, Qi Deng², Dirk Söffker³ (^{1,2,3}U. of Duisburg-Essen)

Aircraft Trajectory Prediction using LSTM Neural Network with Embedded Convolutional Layer – Yutian Pang¹, Nan Xu², Yongming Liu³ (^{1,2,3}Arizona State U.)

Paper Session 12C: Anomaly Detection II

Thursday, 3:15 – 4:45, Room: Pueblo I & II

Session Chair: Gregory Vogl (NIST)

Inter-Turn Short-Circuit Failure of PMSM Indicator based on Kalman Filtering in Operational Behavior – Badr Mansouri¹, Hicham Janati Idrissi², Audrey Venon³ (^{1,2,3}SAFRAN)

Computation Method of Gear Dynamic Response Using Experimental Strain Data and Application in Pitting Fault Analysis – Yongzhi Qu¹, Haoliang Zhang², Zechao Wang³, Zude Zhou⁴ (^{1,2,3,4}Wuhan U. of Technology)

A Hybrid Qualitative and Quantitative Diagnosis Approach – Ion Matei¹, Maksym Zhenirovskyy², Johan de Kleer³, Alexander Feldman⁴ (^{1,2,3,4}PARC)

Career Fair

Tuesday and Wednesday, 9:00 – 5:00
Location: Apache II

Are you still looking for a career opportunity in PHM? The PHM Society can help you to meet your next employer at the Career Fair sessions on September 24–25, 2019!

The PHM Career Fair is an exposition for PHM employers to meet with prospective job seekers. This year the PHM Society is holding a Career Fair within the 11th Annual Conference at Scottsdale, Arizona to enable recruiters and job seekers the opportunity to meet and conduct interviews. Come meet and talk with growing companies hiring in PHM!

Benefits for Recruiters

Recruiters will have access to a large pool of candidates and early access to their resumes to narrow down the qualified candidates. Recruiters will be onsite to interview and have a face-to-face interaction with the candidates for full-time, part-time and internship positions. The career fair is an advertised event and offers employers high visibility and recognition during the conference. Recruiters will be able to share a description of their vacancies prior to the conference.

Benefits for Job Seekers

The career Fair is FREE and OPEN to all registered PHM19 conference participants and recruiters. Candidates of all ages, all levels of experience, and all industries are encouraged to attend. Candidates can access a description of the available openings and e-mail their resumes prior to the career fair to careerfair@pnmconference.org. Recruiters will be onsite to conduct on-the-spot interviews for full-time, part-time and internship positions.

Participating Companies

Collins Aerospace • GE

Tuesday, September 24, 2019

9:00 – 10:30	General Session 1: Collins Aerospace • GE
10:45 – 12:15	Follow-up Discussions 1: 10:45 – 11:30 Collins Aerospace 11:30 – 12:15 TBD
1:30 – 3:00	Follow-up Discussions 2: 1:30 – 2:15 GE 2:15 – 3:00 TBD
3:15 – 4:45	Follow-up Discussions 3: 3:15 – 4:00 TBD 4:00 – 4:45 TBD

Wednesday, September 25, 2019

9:00 – 10:30	General Session 2: TBD
10:45 – 12:15	Follow-up Discussions 4: 10:45 – 11:30 TBD 11:30 – 12:15 TBD
1:30 – 3:00	Follow-up Discussions 5: 1:30 – 2:15 TBD 2:15 – 3:00 TBD
3:15 – 4:45	Follow-up Discussions 6: 3:15 – 4:00 TBD 4:00 – 4:45 TBD

For further details or questions, please contact Abbas Chokor at careerfair@pnmconference.org or enquire at the Registration Desk.

Annual Conference of the Prognostics and Health Management Society 2019

Tutorials

One of the unique features of the PHM conferences is **free technical tutorials** on various topics in health management taught by industry experts. As educational events tutorials provide a comprehensive introduction to the state-of-the-art in the tutorial's topic. Proposed tutorials address the interests of a varied audience: beginners, developers, designers, researchers, practitioners, and decision makers who wish to learn a given aspect of prognostic health management. Tutorials will focus both on theoretical aspects as well as industrial applications of prognostics. These tutorials reach a good balance between the topic coverage and its relevance to the community.

Tutorial Session 1: Introduction to Prognostics

Tuesday, 9:00 – 10:30, Location: Apache I

Matteo Corbetta

SGT, NASA Ames Research Center

Abstract: This tutorial will focus on the fundamentals and basic concepts of prognostics and health management, giving emphasis to condition-based approaches. The audience will be introduced to the key elements that compose a prognostic framework, their interaction, uncertainty and effect on the prediction of the system evolution over time. The session will continue with an overview of data-driven and model-based approaches for prognostics, and will also propose two case studies on prognostic and failure prediction written in Python programming language. The participants will have direct access to the Python scripts and will be able to run them on their personal laptop*. The tutorial will summarize the theory behind the two algorithms, and will guide the audience through the code for a thorough understanding, from data preprocessing to output representation.

Note: The examples will require Python 2.6 or later, and libraries NumPy, SciPy, and matplotlib, installed on the machine. In addition, it is recommended to also download scripts and slides at <https://www.pnmconference.org/tutorials>.

Presenter Bio: Matteo Corbetta is a Research Engineer with SGT Inc., at NASA Ames Research Center, Calif. His research activity focuses on developing algorithms for diagnostics, prognostics, and uncertainty quantification for critical engineering assets. His recent works involves applications in autonomous aerial systems, aerial vehicle diagnostic and prognostic, and urban air mobility. Prior to joining NASA, he worked as R&D Condition Monitoring Systems Engineer at Siemens Gamesa Renewable Energy, Denmark, and as a Postdoctoral Researcher at Politecnico di Milano, Italy. He obtained Ph.D., M.Sc., and B.Sc. in mechanical engineering from Politecnico di Milano in 2016, 2012 and 2009.

Tutorial Session 2: Uncertainty Management for PHM

Wednesday, 9:00 – 10:30, Location: Apache I

Shankar Sankararaman

PwC

Abstract: This tutorial will focus on the significance, interpretation, quantification, and management of uncertainty in prognostics, with an emphasis on predicting the remaining useful life of engineering systems and components. Prognostics deals with predicting the future behavior of engineering systems, and is affected by various sources of uncertainty. In order to facilitate meaningful prognostics-based decision-making, it is important to analyze how these sources of uncertainty affect prognostics, and thereby, compute the overall uncertainty in the remaining useful life prediction. However, several state-of-the-art industrial techniques do not consider a systematic approach to the treatment of uncertainty. This tutorial will explain the paramount importance of uncertainty quantification and management in prognostics, focusing both on testing-based life prediction and condition-based prognostics. In particular, the suitability of classical (frequentist) and subjective (Bayesian) approaches to uncertainty will be discussed, and it will be explained that the Bayesian interpretation of uncertainty is more suitable for condition-based prognostics and health monitoring. Numerical examples will be used to demonstrate that uncertainty quantification in remaining useful life prediction

needs to be approached as an uncertainty propagation problem that can be solved using a variety of statistical methods. Several uncertainty propagation methods will be explained in detail, through immersive implementation (in Python). Finally, practical challenges pertaining to uncertainty quantification and management in prognostics will also be discussed.

Note: This is a hands-on tutorial. It is recommended to download scripts before the tutorial at <https://www.pnmconference.org/tutorials>.

Presenter Bio: Shankar Sankararaman received a B.S. in civil engineering from the Indian Institute of Technology, Madras, in 2007, and later obtained a Ph.D. in civil engineering from Vanderbilt University, Nashville, TN, USA, in 2012. Soon after, he joined NASA Ames Research Center, Moffett Field, CA, where he developed algorithms for system health monitoring, prognostics, decision-making, and uncertainty management. His research focuses on the various aspects of uncertainty quantification, integration, and management in different types of aerospace, mechanical, and civil engineering systems. His research interests include probabilistic methods, risk and reliability analysis, Bayesian networks, system health monitoring, diagnosis and prognosis, decision-making under uncertainty, and multidisciplinary analysis. He is a member of the Non-Deterministic Approaches (NDA) technical committee at the American Institute of Aeronautics, the Probabilistic Methods Technical Committee (PMC) at the American Society of Civil Engineers (ASCE), and the Prognostics and Health Management (PHM) Society. Shankar has co-authored a book on prognostics and published over 100 technical articles in international journals and conferences. Presently, Shankar works as a consultant with PwC where he leads machine learning and predictive analytics efforts for various industrial and business challenges.

Tutorial Session 3: Prognostics and Health Management on the Cloud—An Introduction

Thursday, 10:45 – 12:15, Location: Apache I

Jose Celaya and Indranil Roychoudhury

Schlumberger

Abstract: This tutorial will motivate the use of cloud computing services as a development tool for prognostics applications. It will then cover the implementation of a physics-based prognostics approach on the Google Cloud Platform, and demonstrate how this cloud-friendly PHM approach can be used to predict the Remaining Useful Life (RUL) of an IIoT testbed from the Oil & Gas industry that is representative of a 3-well-pad. Topics covered would be physics-based fault detection, fault isolation, fault identification, and RUL prediction and their 'cloud-friendly' implementation.

Presenter Bios: Indranil Roychoudhury received the B.E. (Hons.) degree in Electrical and Electronics Engineering from Birla Institute of Technology and Science, Pilani, Rajasthan, India in 2004, and the M.S. and Ph.D. degrees in Computer Science from Vanderbilt University, Nashville, Tennessee, USA, in 2006 and 2009, respectively. Currently, Dr. Roychoudhury is an AI Scientist at the Schlumberger Software Technology Innovation Center in Menlo Park, California. Prior to that, he was with SGT, Inc., at NASA Ames Research Center as a Computer Scientist from 2009 - 2018. His research interests include hybrid systems modeling, model-based diagnostics and prognostics, distributed diagnostics and prognostics, and Bayesian diagnostics of complex physical systems. Dr. Roychoudhury is a member of the Prognostics and Health Management Society and a Senior Member of the IEEE.

Want to be a part of next year's PHME2020 Conference (in Turin, Italy) or PHM2020 Conference (in Nashville, Tennessee, USA)? See page 20 for details!

Annual Conference of the Prognostics and Health Management Society 2019

13

Panel Sessions

Panel Session 1: PHM for Aviation Maintenance Repair Organizations

Tuesday, 9:00 – 10:30, Location: Arizona I

Session Chairs: Frank Zahiri (USAF Warner Robins ALC) and Andy Hess (The Hess PHM Group)

Description: Maintenance Repair Organizations (MROs) are an extremely critical part of any military or commercial aviation sustainment enterprise. The efficiency and production performance of any MRO directly effects the associated aircraft's fleet-wide operational availability, readiness, sustainment costs. PHM capabilities coupled with Resilient and Smart Manufacturing related technologies can play significant roles in increasing the efficiency and production performance for any aircraft MRO. This panel will explore current MRO challenges and issues; and focus on how particular PHM capabilities and new Resilient and Smart Manufacturing technologies can positively impact MRO performance and the overall goals for the contemporary sustainment enterprise.

Panelists:

Rob Andes (TDKC)

Daniel Braley (Boeing)

Sudipto Ghoshal (QSI)

Christopher Saldana (George Institute of Technology)

John Semmens (Lockheed Martin)

Panel Session 2: PHM for Manufacturing

Tuesday, 10:45 – 12:15, Location: Arizona I

Session Chair: Greg Vogl (NIST)

Description: The future industrial internet of things (IIoT) will realize the connectivity of machine tools and online diagnostics and prognostics for improved product quality and asset utilization. But the question remains: How do we get there? Machine tools are vital for the production of high-value parts, and these machines will still be mechanical in nature, thus subject to wear and performance changes. One vision of IIoT is a future with maintenance systems with self-diagnostic capabilities that enable equipment to achieve and sustain near-zero breakdown performance. Parts should be produced with no unplanned downtime while reducing manufacturing costs and maintaining or increasing part quality. But how to do so? Manufacturers need smart machine tools with online abilities to assess their own health, so that production isn't halted but enhanced. Through identification of current health and early signs of problems, smart machine tools with prognostic and health management (PHM) systems will give manufacturers the trusted information they need to optimize production. Currently, manufacturers are implementing their own PHM programs based around various sensors including MEMS accelerometers. This panel will bring together a diverse group of speakers from industry and academia to discuss online sensor-based solutions to

transform machine tools into smart machine tools for the future IIoT. Discussion will focus around sensor-based PHM solutions for spindles and linear axes, which are the main elements of machine tools that affect part quality. However, another goal of the panel is to spur discussion to explore the potential impact of these relatively new approaches to other industries of interest to the PHM Society, such as transportation vehicles and energy production assets.

Panelists:

[Sreerupa \("Rupa"\) Das](#) (*Lockheed Martin*)
[Jaydeep Karandikar](#) (*GE Global Research*)
[Mark Walker](#) (*D2K Technologies*)
[Lou Zhang](#) (*Machine Metrics*)

Panel Session 3: The Electrifying Pace of Automotive PHM

Tuesday, 1:30 – 3:00, Location: Arizona I

Session Chair: [Azeem Sarwar](#) (*General Motors*)

Description: Increasing electric and electronic content in modern day vehicles is bringing value to the customers but also adding to vehicle complexity. US-based OEMs and suppliers collectively paid about 7.4 billion USD in 2016 for warranty claims – with 50% or more related to electric or electronic components. With increasingly tight emission requirements and growing societal pressures, the auto industry is turning toward electric vehicles. More component sensing is possible than ever before, and more vehicles are boasting 4G connectivity that is essential to off-load data for cloud-based analytics. PHM demands a strategic approach aligned not only with company goals and product requirements but also linked into its field service support. This panel will explore the challenges and opportunities posed by the increasingly electrified automotive market and how PHM technologies can help mitigate warranty costs.

Panelists:

[Regan Dixon](#) (*General Motors*)
[Ravindra Patankar](#) (*KPIT Technologies Limited*)
[Michael Pecht](#) (*CALCE, University of Maryland*)
[Daniel Riegel](#) (*Robert Bosch GmbH*)

Panel Session 4: PHM for Space Applications

Tuesday, 3:15 – 4:45, Location: Arizona I

Session Chairs: [Derek DeVries](#) (*NGC*) and [Andy Hess](#) (*The Hess PHM Group*)

Description: The planned use of manned and long term crewed space platforms, as well as quick to launch and reusable space vehicles, is increasing on a very accelerating rate. After the legacy NASA developed Space Shuttle and LEO ISS; among many things, there are near term NASA plans for: a lunar Gateway station, a permanent lunar base, asteroid present, and Mars bases. Vehicles and platforms to accomplish these far reaching goals will include: crewed space and surface based stations and habitats; various types of launch, long range transportation, and orbit to surface vehicles; and all kinds of support subsystems and technologies. Beside NASA and other government directed organizations; commercial based entities are aggressively developing systems to achieve these same and additional space related goals. These associated commercial focused applications include space tourist to LEO, space based hotels, and resource mining. This panel will focus on issues and challenges associated with these applications; and how PHM capabilities can be applied to reduce risks, increase efficiencies, and ensure resilient sustainment of these vehicles, platforms, habitats, and systems.

Panelists:

[Derek R. DeVries](#) (*NGIS*)
[Terry Haws](#) (*NGIS*)
[James A. Larkin](#) (*Aerojet Rocketdyne*)

Panel Session 5: PHM for Human Health and Performance

Wednesday, 9:00 – 10:30, Location: Arizona I

Session Chairs: [Thurmon Lockhart](#) (*Arizona State University*) and [Erica Forzani](#) (*Arizona State University*)

Description: The age distribution and the mean age are undergoing rapid and significant changes worldwide. Based on current projections

made by the United States Census Bureau, the present population of older adults 65 years of age and older will double by the year 2030 and constitute a significant portion of the total population. Considering that three-fourths of Americans age 65 and older have one or more chronic conditions, with nearly 50% of them reporting two or more conditions, the availability of health care resources and health care providers becomes critically important. Many chronic diseases that severely limit quality of life are difficult to manage in their later stages, but can be managed more effectively and efficiently if treated early – as such, underpinnings of Predictive Health Management (PHM) – “predict and render preventive measures prior to failure” is well suited to respond to the health needs of older adults. Implementation of new and innovative approaches to healthcare delivery that focuses on an integrated, yet affordable approach that “closes the gap” between the traditionally separate fields of health monitoring and prevention is necessary. As such, this panel will discuss contributions in the fields of wearable smart sensors, sensor-data-fusion, machine learning and data mining, prediction and diagnosis, and electronic health records and databases - all in the context of prognostics and health management for human health and performance. Moreover, this panel builds on the discussions of the experience and processes encountered/created by the panelists, and highlights specific challenges, needs, and wants with respect to the development and implementation of standards and guidelines pertaining to PHM in the area of human health and performance. This diverse group of panelists will present their perspectives on PHM as it pertains to human assets. Conversations will include PHM's current and future envisioned applications within general healthcare, high stress work environments, sports/athletes, theatre, and space environments, along with how the needs, data stream, and supporting PHM tools, can be better designed, developed, implemented, integrated, verified, and validated to impact the new paradigm of smart healthcare.

Panelists:

[Erica Forzani](#) (*Arizona State University*)
[Liang Dong](#) (*Iowa State University*)
[Thurmon Lockhart](#) (*Arizona State University*)
[Jennifer Margrett](#) (*Iowa State University*)
[Balaji Narashimhan](#) (*Iowa State University*)
[Rahul Soangra](#) (*Chapman University*)
[Teresa Wu](#) (*Arizona State University*)
[Yezhou Yang](#) (*Arizona State University*)

Panel Session 6: Precision Agriculture

Wednesday, 10:45 – 12:15, Location: Arizona I

Session Chair: [Alice Robinson](#) (*Karrott Reserach*)

Description: The objective of our panel is to showcase the exciting world of Precision Agriculture and specifically the emerging revolution in Data-Driven agriculture. Precision Agriculture has been defined by Wikipedia as the key component of the third wave of modern agriculture revolutions. However, despite the many significant advances that have been made in GPS-driven agricultural equipment and the use of in-field sensors and drones for soil and crop monitoring, data-driven, daily farm management still remains a “Holy Grail” to be fully realized. This panel will examine the challenges faced in Big Data acquisition and analysis for rapidly delivering actionable information on a daily basis for supporting complex, farm management decisions.

Panelists:

[David Brown](#) (*Pivot Bio*)
[Eric Johnson](#) (*Airbus*)
[Stan Martin](#) (*ORNL*)

Panel Session 7: PHM Enablers for Autonomous Systems

Wednesday, 1:30 – 3:00, Location: Arizona I

Session Chairs: [Karl Reichard](#) (*Pennsylvania State University*) and [George Vachtsevanos](#) (*Georgia Tech*)

Description: The panel will address PHM and other technologies in the design and operation of unmanned autonomous systems (aerial, ground, sea surface and undersea vehicles). Autonomous systems are attracting the attention of researchers and users in a variety of appli-

cation domains from Intelligence, Surveillance and Reconnaissance to rescue operations, border patrol, driverless vehicles, driverless air taxis, undersea exploration, among others. It is documented that autonomous systems (UAVs, for example) are failing at alarming rates. PHM and related technologies aim to introduce new tools/methods for their resilient design and safe operation. The panel is inviting the participation of scientists/engineers, students and academics, company personnel, government personnel involved in autonomy and autonomous systems, conference participants interested to learn about the emerging autonomous systems technologies. Panel members and panel participants will discuss current and future technologies for improved system performance. Actual case studies and examples will be used to illustrate the technological innovations.

Panelists:

[Yao Cui](#) (*Kuka Robotics*)
[Wolfgang Fink](#) (*University of Arizona*)
[Kai Goebel](#) (*PARC*)
[Steve Holland](#) (*General Motors, retired*)
[Mathieu Kemp](#) (*Monterey Bay Aquarium*)

Panel Session 8: Fielded Systems: Lessons Learned

Wednesday, 3:15 – 4:45, Location: Arizona I

Session Chairs: [Andy Hess](#) (*The Hess PHM Group*) and [Ash Thakker](#) (*Global Technology Connections, Inc.*)

Description: Several long-term career practitioners in the fields of PHM and CBM+ will share their experiences, observations, and lessons learned as part of this distinguished panel of experts. Much can be learned from the requirements generation, development, Verification and Validation, implementation, maturation, fielded use, fleet support, and enterprise-wide use of real world PHM systems. Just the development of the individual capabilities that make up a comprehensive and fully integrated PHM system; provides many lessons learned - both good and bad. A recently evolving important focused area will also be explored around the question: “just who really owns the data that these systems produce”. These issues need to be discussed, documented, and viewed across the many industry sectors that are fielding PHM systems. Short presentations will be given by all panel participants that describe their particular topic area and experiences within the PHM/CBM+ domains. An open panel discussion will follow to explore some of these identified specific issues and concerns.

Panelists:

[James \("Hoffy"\) Hofmeister](#) (*Ridgetop Group*)
[Mark Hollins](#) (*NAVAIR*)
[Greg Kacprzyński](#) (*Sikorsky / Lockheed Martin RMS*)
[Piyush Modi](#) (*NVIDIA*)
[Michael Pecht](#) (*CALCE, University of Maryland*)

Panel Session 9: Theoretical Aspects of Prognostics

Thursday, 9:00 – 10:30, Location: Apache I

Session Chair: [Chetan Kulkarni](#) (*SGT Inc., NASA Ames Research Center*)

Description: This session is focused on the development of Theoretical Aspects in Prognostics. In majority of the Prognostic and Health Management applications particle filtering-based algorithms are being implemented as the state-of-the-art. However, PF-based prognosis frameworks have demonstrated their drawbacks when trying to estimate the probability of failure in nonlinear, non-Gaussian systems performing uncertain operating profiles. To overcome this issue, it is first necessary to establish adequate performance metrics for the framework which has been discussed and presented in recent years. It has been observed that not much work has been done on standardizing prognostics definitions as they suffer from ambiguous and inconsistent interpretations.

The session plans to bring together academics and industry experts in the area to discuss about the lack of standards due to varied end-user requirements as well as varying application domains, including aerospace, automotive, nuclear power, electrical etc.

Panelists:

[Marcos Orchard](#) (*Universidad de Chile*)
[Marcos Quiñones](#) (*Vanderbilt University*)
[Bin Zhang](#) (*University of South Carolina*)

Panel Session 10: PHM19 Education and Professional Development Workshop

Thursday, 9:00 – 10:30, Location: Arizona I

Session Chairs: [Karl Reichard](#) (*Pennsylvania State University*) and [Jeff Bird](#) (*TECNos*)

Description: The PHM Society mission emphasizes free and unrestricted access to PHM knowledge, promotion of interdisciplinary and international collaboration in PHM and leading the advancement of PHM as an engineering discipline. 'Products' for PHM education and professional development accessible to the whole community contribute to all of these aims.

The PHM Taxonomy under development offers a common basis for understanding PHM domains, and skill levels and advancement. The PHM Continuing Professional Development Guidelines offer personal and organizational career planning and enhancement for the PHM community as a whole.

This workshop format will validate and advance the scope, content and applications of these two products to serve the widest domains of PHM and its stakeholders. Draft versions of the products will be made available in advance through updates to the existing PHM Society forums.

Panelists:

[Jeff Bird](#) (*PHM Society EPD Committee Chair*)
[Jamie Coble](#) (*University of Tennessee*)
[Harry Julijanto](#) (*Rolls Royce USA*)
[Nancy Madge](#) (*TECNos*)
[George Vachtsevanos](#) (*Georgia Tech*)

Panel Session 11: Small Business

Thursday, 10:45 – 12:15, Location: Arizona I

Session Chair: [Ash Thakker](#) (*Global Technology Connection, Inc.*)

Description: There are a variety of different small business organizations involved in prognostics and health management technology and solutions, and their applications include use cases in both the commercial and government/defense sector. Challenges and successes from small business organizations in this field will be highlighted, including how they engage and collaborate with larger organizations on PHM related projects, whether they focus on a service or product type of business model, and different approaches they use for growing and funding their business. Aspects related to which funding approaches they consider, such as SBIR/government grants, venture capital / investment, among other approaches will also be discussed. Ways forwards on how the PHM Society can involve and engage more small business organizations or include more topics at the conference will also be considered.

Panelists:

[Jason Cullison](#) (*Frontier Technology Inc.*)
[Neil Eklund](#) (*Analom*)
[Sudipto Ghoshal](#) (*Qualtech Systems Inc.*)
[Manny Nwadiogbu](#) (*Smart Asset Monitoring & Management Systems*)
[Felipe Parages](#) (*Uptake*)

Panel Session 12: Standards for the Digital Stage

Thursday, 3:15 – 4:45, Location: Arizona I

Session Chairs: [Jeff Bird](#) (*TECNos*) and [Brian Weiss](#) (*NIST*)

Description: Every industry associated with the discipline of PHM is undergoing a digital transformation. This is especially so with the automotive sector, but other, more traditional disciplines are not far behind. Most standard-setting organization have taken cognizance of this shift and are responding to it with new documents outlining their approach to dealing with all the new technology. In the mobility sector, SAE International is constituting a number of technical committees to deal with digital transformation and to develop standards related to different aspects of the phenomenon. Digital communications and interoperability, Blockchain, Model-based design and testing, Artificial intelligence in

safety critical systems, etc., are some of the topics being considered. Other organizations such as the A4A, IATA, IEEE, and ASTM are also developing standards in this area. This panel will bring together industry experts to discuss the latest progress in these fields.

Panelists:

- Steve Holland (GM Research (retired))
- Logen Johnson (SAE International)
- Ginger Shao (Honeywell Aerospace)

Keynote & Luminary Speakers

Keynote Speaker: Arizona As a Place of Commerce and Business

Tuesday, 8:10 – 8:30

Location: Grand Coronado I – III

Kevin Sullivan

Arizona Commerce Authority

Abstract: TBD

Speaker Bio: Kevin Sullivan brings more than 23 years' experience to the Arizona Commerce Authority. He has spent his career leading and supporting high-performance sales teams primarily within the high technology industry. His experience with both startup (DirecTV, Accrue Software & Good Technology) and large, established global companies in Silicon Valley (SGI, Aspect Communications & Adobe) has provided a wide array of knowledge, which he utilizes to lead the ACA's business attraction efforts.

Mr. Sullivan is a results-driven executive with solid operations management and leadership experience, facilitating strong cross-functional relationships across sales, marketing, finance and legal teams. He consistently builds, motivates and leads teams that have been recognized for their focus on client satisfaction and on the ability to achieve aggressive sales and financial objectives. Mr. Sullivan exhibits a strong record of increasing corporate productivity and achieving results.

Mr. Sullivan holds a Bachelor of Science degree in Business Administration from Saint Mary's College and Juris Doctor from Washburn University.

Keynote Speaker: Lessons Learned in Predictive Analytics for Airline Maintenance Operations

Tuesday, 8:30 – 8:50

Location: Grand Coronado I – III

Josh Melin

Honeywell

Abstract: Honeywell will share lessons learned on its journey to provide improvements in operational interruptions for Airline Operations thru deploying predictive and prescriptive analytics models. While Honeywell has been able to deploy analytics on 5 aircraft types on multiple ATA chapters with around 35% reduction in operation interruption events at a 1% no fault found rate using 100% existing data, the journey didn't come easy. Honeywell will share its lessons learned along the way and some challenges facing the industry that will take the data science community at large to solve.

Speaker Bio: Josh is a Director and the Aero Connected Maintenance Product Owner with Honeywell. He is responsible for managing the strategy, business plan, and P&L for Connected Maintenance. Josh has been with Honeywell over 11 years in positions of increasing responsibility in Engineering, Project Management, Lean, Site Operations Leadership, and Product Line Leadership. Josh holds a Bachelor's of Science Degree in Mechanical Engineering from the Pennsylvania State University and a Master's of Business Administration from Arizona State University.

Keynote Speaker: From the Earth To the Sky: How Bio Fuels and Other Renewable Energy Sources May Impact Global Climate Change and Alter the Course of History

Tuesday, 12:15 – 1:30

Location: Grand Coronado I – III

Stan Martin

Oak Ridge National Laboratory

Abstract: Since the so-called "Neolithic Revolution", when agriculture became a core activity for humanity, humans have wrestled with energy related issues. For the first several millennia, energy was derived primarily from renewable biomass in the form of campfires and cooking fires built from reeds, brush, and woods. Agriculture, transportation, and construction activities were all limited to human and animal power, and this status quo remained relatively unchanged for millennia. The industrial revolution changed all of that as fossil fuels (coal, oil, and gas) came to dominate the energy landscape. The density of energy found in these sources enabled unprecedented advances in prosperity, as humans learned to utilize these sources with ever increasing efficiency in automobiles, tractors, aircraft, and rockets. These advances, which occurred rapidly over the past two centuries, have been ones of unprecedented change that have fundamentally altered our way of life. Within the past two decades, the pace of innovation has increased again due to the coalescence of advances in automation, computerization, and information technology together with an ever increasing understanding of genetics. These advances have conspired to set in motion a series of events which some are calling a "new epoch". The future of humanity in this new epoch will be largely determined by the choices we as nations, corporations, and individuals make. How we use energy is one determinant factor in this equation. Used correctly and wisely, our energy resources have the potential to mitigate the worst effects of climate change, eliminate global hunger, and launch humanity into the stars as a multi-planet species. However, if used unwisely the same tools can be used to exacerbate problems such as inequality, environmental degradation, and pollution resulting in a planet that will be mostly uninhabitable by the end of this century. Here we explore both the promise and the peril of the new energy economy and reflect on how our civilization can "steer the ship" in a meaningful way to ensure a prosperous and hopeful future for humanity.

Speaker Bio: Dr. Stan Martin leads the data management group for the Bio Sciences Division at Oak Ridge National Laboratory (ORNL). Oak Ridge National Laboratory is the largest US Department of Energy science and energy laboratory, conducting basic and applied research to deliver transformative solutions to compelling problems in energy and security. ORNL's diverse capabilities span a broad range of scientific and engineering disciplines, enabling the Laboratory to explore fundamental science challenges and to carry out the research needed to accelerate the delivery of solutions to the marketplace. Stan earned his PhD in Plant Pathology from North Carolina State University where he used neutron scattering, X-ray crystallography, and molecular dynamic simulation techniques to elucidate the mechanisms involved in viral capsid dynamics. Plant virus capsids have been extensively studied as candidate vessels for the delivery of chemotherapeutic agents in cancer research.

Stan has extensive experience in the areas of data analytics, data management, remote sensing, and plant sciences. Stan has also spent a number of years in the genomics space, earning an M.S. in bioinformatics from North Carolina State University. Stan's current research interests include topics related to artificial intelligence in plant sciences, such as the use of unmanned aerial vehicles (UAVs), machine learning, and hyperspectral imaging technology to gather data and make inferences about plant health, and the environmental and management factors that affect plant growth patterns.

Luminary Speaker: The Sciences of Global Megaflooding, Paleoflood Hydrology, and Modern Flood Risks

Wednesday, 8:00 – 8:50

Location: Grand Coronado I – III

Victor Baker

University of Arizona

Abstract: After centuries of geological controversy, it is now well-established that the last major deglaciation of planet Earth, about 16,000 years ago, involved huge outbursts of water from the wasting continental ice sheets, and that this water constituted floods of immense magnitude and relatively short duration. These "megafloods" had short-term peak flows comparable to the more prolonged flows of ocean currents. Recent discoveries have documented more than 40 examples of megaflooding and related immense floods that occurred over vast regions of Asia, Europe, North America, South America, Antarctica, Iceland, and even on the planet Mars. It is becoming increasingly clear that immense outburst floods likely induced very rapid, short-term effects on the planetary environments on both Earth and Mars, greatly altering climates, drainage evolution, and the planetary patterns of water and sediment movement to lakes, seas, and oceans. The Earth megafloods may well have inspired the flood myths that are a part of human cultural heritages around the world.

The study of very ancient megaflooding has led to techniques for studying the kinds of extreme flooding that are increasingly posing hazards to life and property in today's world. The most extreme of these modern floods pose particular risk to nuclear power plants, river dams, and other major infrastructure. The science of "paleoflood hydrology" was initiated by the speaker to provide exact information on the largest flood events that nature can generate. This science is increasingly being used worldwide to estimate the potential flood risks posed by climatic change.

Speaker Bio: Victor R. Baker is Regents' Professor of Hydrology and Atmospheric Sciences, Geosciences, and Planetary Sciences, University of Arizona. He has a B.S. (Geology from Rensselaer Polytechnic Institute in 1967 and a Ph.D. (Geology) from the University of Colorado in 1971. From 1996-2004 he was Department Head of Hydrology and Water Resources (now Hydrology and Atmospheric Sciences), University of Arizona.

Baker has authored or co-authored more than 1000 scientific contributions, including 18 books, 436 research articles and chapters, more than 525 abstracts and short research reports. His research has concerned paleoflood hydrology (a field of study that he defined in the 1970s and 1980s); flood geomorphology; channels, valleys, and geomorphic features on Mars and Venus; catastrophic Pleistocene megaflooding in the northwestern U.S. and central Asia; history/philosophy of Earth and planetary sciences; and the interface of environmental science with public policy. Professor Baker has been President of the Geological Society of America (1998), and among his other honors are Foreign Membership in the Polish Academy of Sciences (1994); Honorary Fellowship in the European Union of Geosciences (1999); the David Linton Award of the British Society for Geomorphology (1995); the Distinguished Scientist Award (2002) and Distinguished Career Award (2010), both from The Geological Society of America Quaternary Geology and Geomorphology Division; the Inaugural International Lectureship of the Geological Society of America (2012-2013), a Fulbright-Hays Senior Research Fellowship (1979-1980); an Indo-American Fellowship (1987-1988); and professional society Fellowships respectively in the American Geophysical Union, the American Association for the Advancement of Science, The Geological Society of America, and the British Society for Geomorphology. His work on megafloods has been featured in multiple television documentaries for PBS, BBC, and the National Geographic, Discovery, and History Channels, including the 2005 NOVA production "Mystery of the Megaflood" and the 2017 NOVA production "Volatile Earth" episode "Killer Floods."

Keynote Speaker: Advancements in Asset Health Monitoring Using AI

Wednesday, 12:15 – 1:30

Location: Grand Coronado I – III

Jon Dunsdon

GE Aviation Digital

Abstract: This talk will focus on application of AI and machine learning technologies in health monitoring of jet engines. Specifically, how AI technologies are pushing the envelope and changing the ways we traditionally thought about PHM. This talk will highlight how Physics based understanding and data driven techniques must come together to drive differentiated outcomes for airline customers. The talk will also present examples on how to combine both structured and unstructured data for predictive maintenance. The presentation will conclude with a section on GE aviation's lessons learnt in this area for the past 7 years.

Speaker Bio: Jon Dunsdon has over 20 years of digital software and services experience with GE, including roles with increasing responsibility across Aviation Systems, Global Research and Aviation. Jon is currently serving as Chief Technology Officer for GE Aviation Digital leading strategy and working with our customers on their Digital Transformations.

Prior to this, Jon served as the Chief Architect for GE Aviation where he led the technical strategy. He has prior experience in data analytics; solution architecture; product definition; and the development of strategic service, product, and technology roadmaps.

Jon holds a degree in Aeronautics and Astronautics (Southampton, UK) and is a Chartered Engineer. He is also an advisor to the UK government on the impact of research across the aerospace industry.

Luminary Speaker: Application of PHM in Sports Analytics

Thursday, 8:00 – 8:50

Location: Grand Coronado I – III

Sergio Santamaria

Phoenix Suns

Abstract: TBD

Speaker Bio: TBD

Technology Demonstrations

Session Chairs: Jim Larkin (Aerojet Rocketdyne), Laurel Frediani (Sporian Microsystems) and Derek Devries (NGC)

The PHM Society invites our conference sponsors to show off their diagnostic and prognostic engineering approaches through PHM Technology Demonstrations. The concept of the demonstrations is to offer a true "hands-on" learning experience for attendees. Multiple demonstrations will be given as brief tutorials to small groups. Each demo will last 30 to 60 minutes, where attendees will be encouraged to actively participate.

Technology Demonstrations

Tuesday, 9:00 – 4:45, Locations: Apache III & Apache IV

Wednesday, 10:45 – 4:45, Locations: Apache III & Apache IV

Tuesday, September 24, 2019

- 9:00 – 10:30 **Condition Indicator Design & RUL Estimation using MATLAB** (Rachel Johnson and Sudheer Nuggehalli, MathWorks)
- 10:45 – 12:15 **Connected Ecosystem for Aerospace Intelligence and PHM** (Kurt Doughty and Dave Larsen, Collins Aerospace)
- 1:30 – 3:00 **TBD** (Ginger Shao, Honeywell)
- 3:15 – 4:45 **TBD** (Justinian Rosca, Siemens)

Wednesday, September 25, 2019

- 10:45 – 12:15 **Testability Engineering And Maintenance System (TEAMS) Toolset** (Deepak Haste and Sudipto Ghoshal, QSI)
- 1:30 – 3:00 **AI Assisted Borescope Inspections** (Abhinav Saxena, GE)
- 3:15 – 3:45 **Health-Ready Components and Systems /**
- 3:45 – 4:45 **ExchangeWell Digital Data Marketplace** (Ben Towne, Steve Holland, Leon Gommans, and Drasko Draskovic, SAE Industry Technologies Consortia)

Product Showcases

Session Chairs: Jim Larkin (Aerojet Rocketdyne), Laurel Frediani (Sporian Microsystems) and Derek Devries (NGC)

The PHM Society introduces an exciting new type of opportunity for 2019. It is called the Product Showcase, where presenters may take advantage of a unique platform to advertise company products and services in a focused environment. The intent is to generate audience interest for follow-up exchange.

The Product Showcase sessions will be comprised of a series of 10-minute marketing presentations. The communication will be one-way, where all questions/answers are reserved for off-line. Audiences will enjoy this approach as companies strive to make significant first impressions during a condensed window of time.

Product Showcases

Wednesday, 9:00 – 10:30, Location: TBD

Wednesday, September 25, 2019

- 9:00 – 9:05 **Introduction and Ground Rules**
- 9:05 – 9:15 **Making Maintenance Smarter: NIST Measurement Science to Increase Process and Equipment Reliability** (Brian Weiss, NIST)
- 9:15 – 9:25 **PTC ThingWorx – The Industrial IoT Platform for PHM** (Ian Boulton, PTC)
- 9:25 – 9:35 **TBD** (Justinian Rosca, Siemens)
- 9:35 – 9:45 **Comprehensive Fault Management - the TEAMS way** (Sudipto Ghoshal, QSI)
- 9:45 – 9:55 **TBD** (Abhinav Saxena, GE)
- 9:55 – 10:05 **A Registry for Health-Ready Components & Systems and a Digital Data Marketplace For Data They Produce** (Ben Towne, SAE Industry Technologies Consortia)
- 10:05 – 10:15 **Oil Debris Monitoring – Advanced Techniques for Equipment Health Management** (Stephane Daviault, Gastops)
- 10:15 – 10:25 **Foresight HUMS: A Prognostic Health Management System for Rotorcraft** (Eric Bechhoefer, GPMS)
- 10:25 – 10:30 **Closing Remarks**

Poster Presentations: Tuesday 5:30 – 8:00 Grand Coronado I – III (During Cocktail Reception)

Technical Program Posters

- Development of a CPS-Enabled Rehabilitation System for Improved Patient Recovery** – Jianshe Feng¹, Pin Li², Hossein Davari³, Jay Lee⁴ (^{1,2,3,4}U. of Cincinnati)
- Unsupervised Online Deep Learning Method for Remaining Useful Life Prediction** – Yue Zhang¹, Yongzhi Qu², David He³ (¹Wuhan U. of Technology; ²U. of Minnesota Duluth; ³U. of Illinois at Chicago)
- Hybrid Fault Prognosis for Excitation Capacitors of Self-Excited Induction Generator for Wind Energy Applications** – Massinissa Derbal¹, Houari Toubakh², Abdelhamid Bouchachia³ (¹École Nationale Polytechnique; ²Kasdi Merbah U.; ³Bournemouth U.)
- Uncertainty Quantification of Flight Trajectory for Small Unmanned Aerial Vehicles** – Portia Banerjee¹, Matteo Corbetta² (^{1,2}SGT, Inc., NASA Ames)
- Robust Gear Fault Diagnosis Based on Signal Segmentation and Damage Visualization** – Hyung Jun Park¹, Seokgoo Kim², Seok-Ju Ham³, Huh Seok Haeng⁴, Joo-Ho Choi⁵ (^{1,2,3,5}Korea Aerospace U.; ⁴LIG Nex1)
- Aircraft APU Prognostic Health Monitoring Utilizing Physics-Based Model** – Lukas Palaj¹, Jan Neuzil², Heiner Bruns³ (^{1,2,3}Honeywell)
- Left Ventricular Assist Device Thrombus Detection Using Wavelets and Image Classification** – Steven Reuter¹, Ian Precht², Jason Kolodziej³, Steven W Day⁴ (^{1,2,3,4}RIT)

Student Posters

TBD – TBD (TBD)

Doctoral Symposium Posters

- A Physics-based Deep Learning Technique for Prognostics** – Khaled Akkad (University of Illinois–Chicago)
- Vibration-based Condition Monitoring of Industrial Drivetrains Operating under Non-stationary Conditions** – Madhurjya Dev Choudhury (University of Auckland)
- Methodology of Adaptive Prognostics and Health Management Using Streaming Data in Big Data Environment** – Jianshe Feng (University of Cincinnati)
- Multimodality Information Fusion for Aging Pipe Strength and Toughness Estimation Using Bayesian Networks** – Jie Chen (Arizona State University)
- Probabilistic Risk Assessment and Mitigation for UAS Safety and Traffic Management** – Jueming Hu (Arizona State University)
- Adapting Approximate Entropy as a Health Indicator of Rotating Machinery for Estimation of Remaining Useful Life** – Cody Walker (University of Tennessee)
- Novel Waveforms, Models, Algorithms for Cable Health Monitoring** – Xuan Wang (University of South Carolina)
- Deep Learning Enable Diagnostics and Prognostics of Machine Health Condition** – Wo Jae Lee (Purdue University)
- A Framework for Resilience-Informed Decision-Making in Early Design** – Daniel Hulse (Oregon State University)
- A Framework to Interpret Deep Learning-Based Health Management System with Human Interactions** – Namkyoung Lee (University of Maryland)

PHMEurope 2020

Turin, Italy, July 1 – 3

Fifth Europe Conference of the Prognostics and Health Management Society
Turin, Italy

Planning Meetings:

Thursday, September 26th
9:00 – 9:30 (PHME2020)
9:30 – 11:00 (PHM2020)
Location: Apache II

**Volunteers
Needed!**

PHM 2020

Nashville, TN, September 28 – October 1

Twelfth Annual Conference of the Prognostics and Health Management Society
Loews Vanderbilt Hotel, Nashville, TN

www.phmsociety.org

Conference Management Team

Conference Chairs

Wolfgang Fink (*University of Arizona*)
Ginger Shao (*Honeywell*)

Local Chairs

Chris Hickenbottom (*Honeywell*)
Manny Nwadiogbu (*SAMMS, LLC*)

Conference Coordinators

Roxane Rose (*Executive Events*)
Yvonne Lopez (*Executive Events*)

Conference Advisor

Karl Reichard (*Pennsylvania State University*)

Sponsorship Chairs

Michael Walker (*D2K Technologies*)
Jim Larkin (*Aerojet Rocketdyne*)
Laurel Frediani (*Sporian Microsystems*)
Derek DeVries (*Northrop Grumman*)

Keynote/Luminaries Chair

Andy Hess (*Hess PHM Group*)

Technical Program Committee

Bin Zhang – Co-Chair (*University of South Carolina*)
Abhinav Saxena – Co-Chair (*GE*)
José Celaya (*Schlumberger*)
Ian Jennions (*IVHM Centre*)
Chetan Kulkarni (*SGT Inc., NASA Ames Research Center*)
Madhav Mishra (*Luleå Univ. of Technology, Sweden*)
Ramin Moradi (*University of Maryland*)
Marcos Orchard (*University of Chile*)
Ravi Rajamani (*drR2 consulting*)

Technical Program Proceedings Chair

Scott Clements (*Lockheed Martin Corp.*)

Data Challenge Chairs

Kurt Doughty (*Collins Aerospace*)
Kamal Medjaher (*ENIT*)
Justinian Rosca (*Siemens*)

Tutorials Chair

Kai Goebel (*PARC*)

Short Course Chairs

Jeff Bird (*TECnos*)
George Vachtsevanos (*Georgia Tech*)
Neil Eklund (*Analom*)

Conference Materials Chair

Scott Clements (*Lockheed Martin Corp.*)

Website Development Chair

Scott Clements (*Lockheed Martin Corp.*)

Conference Finances Chair

Karl Reichard (*Pennsylvania State University*)

Panel Sessions Chairs

Radu Pavel (*TechSolve*)
David Siegel (*Predictronic*)

Workshops

Brian Weiss (*NIST*)
Neil Eklund (*Analom*)

Technology Demonstrations & Product Showcases Chairs

Laurel Frediani (*Sporian Microsystems*)
Jim Larkin (*Aerojet Rocketdyne*)
Derek DeVries (*Northrop Grumman*)

Doctoral Symposium Chairs

Jamie Coble (*University of Tennessee, Knoxville*)
Felipe Viana (*University of Central Florida*)

Posters Session Chairs

Jamie Coble (*University of Tennessee, Knoxville*)
Alexslis Maindze (*IVHM Centre*)
Nick Eleftheroglou (*Delft Univ. of Technology*)
Sofia Koukoura (*University of Strathclyde, Scotland*)
Ramin Moradi (*University of Maryland*)

Conference Career Fair Chair

Ginger Shao (*Honeywell*)

Educational and Professional Development

Jeff Bird (*TECnos*)
Karl Reichard (*Pennsylvania State University*)

Diversity Outreach

Kathryn Elliott (*Rolls Royce*)
Jamie Coble (*University of Tennessee, Knoxville*)

Academic Outreach Chair

Ian Jennions (*IVHM Centre*)
Jim Larkin (*Aerojet Rocketdyne*)

Student Activities Chair

Sofia Koukoura (*University of Strathclyde, Scotland*)
Turki Haj Mohamad (*Villanova University*)

SAE Liaison

Rhonda Walthall (*Collins Aerospace*)

Publicity Chairs

Scott Clements (*Lockheed Martin Corp.*)
Neil Eklund (*Analom*)
Kai Goebel (*PARC*)
Sofia Koukoura (*University of Strathclyde, Scotland*)

Communications Chair

Scott Clements (*Lockheed Martin Corp.*)

PHM Society Board of Directors

Andrew Hess – President (<i>The Hess PHM Group</i>)	Neil Eklund (<i>Anatom</i>)	Dave Larsen (<i>Collins Aerospace</i>)
Rhonda Walthall – Vice-president (<i>Collins Aerospace</i>)	Manuel Esperón (<i>Johnson Controls</i>)	Jay Lee (<i>University of Cincinnati</i>)
Karl Reichard – Treasurer (<i>Pennsylvania State University</i>)	Wolfgang Fink (<i>University of Arizona</i>)	John Madsen (<i>Northrop Grumman</i>)
Peter Sandborn – Secretary (<i>University of Maryland</i>)	Kai Goebel (<i>PARC</i>)	Sankaran Mahadevan (<i>Vanderbilt University</i>)

	Ian Jennions (<i>Cranfield University, UK</i>)	Joseph Thorp (<i>ARAMCO</i>)
	Greg Kacprzyński (<i>Lockheed Martin Corp.</i>)	Serdar Uckun (<i>Telact</i>)
		George Vachtsevanos (<i>Georgia Tech</i>)

PHM Society Corporate Sponsors

PHM Society Corporate Sponsors	
 Also a Conference Platinum Sponsor	Lockheed Martin solves the world's toughest technology challenges. More than 70 nations rely on Lockheed Martin employees, products and technologies to help them protect and connect their citizens and advance scientific discovery. In a time of growing unpredictability and evolving threats, innovation and performance are at the center of everything we do.
 Also a Conference Silver Sponsor	Northrop Grumman is a proud corporate sponsor of the PHM Society. Northrop Grumman is a leading global security company providing innovative systems, products and solutions in aerospace, electronics, information systems, and technical services to government and commercial customers worldwide. Please visit www.northropgrumman.com for more information.
 Also a Conference Bronze Sponsor	SAE Industry Technologies Consortia (SAE ITC) is a trade association affiliate of SAE International ideally suited to help the Mobility Community implement the solutions and best practices captured in International standards and technical documents. Together, SAE International and SAE ITC are helping unlock the potential of Integrated Vehicle Health Management (IVHM) technology and the economic advantages it offers through groundbreaking standards, databases and training resources.

PHM2019 Conference Sponsors

PHM Conference 2019 Platinum Sponsors	
	Collins Aerospace , a unit of United Technologies Corporation, is a leader in technologically advanced and intelligent solutions for the global aerospace and defense industry. Created in 2018 by bringing together UTC Aerospace Systems and Rockwell Collins, Collins Aerospace has the capabilities, comprehensive portfolio and expertise to solve customers' toughest challenges and to meet the demands of a rapidly evolving global market.
	GE Aviation From the turbosupercharger to the world's most powerful commercial jet engine, GE's history of powering the world's aircraft features more than 90 years of innovation. GE Aviation is a world-leading provider of commercial, military and business and general aviation jet and turboprop engines and components as well as avionics, electrical power and mechanical systems for aircraft. As a leader in aviation technology, GE Aviation continues to design, develop and manufacture jet engines, components and integrated systems for military, commercial and business and general aircraft as well as aero-derivative gas turbines for marine applications. GE Aviation is becoming a digital industrial business with its ability to harness large streams of data that are providing incredible insights and in turn, real operational value for customers. In addition, GE Aviation is the world's leading integrated engine maintenance resource, with a portfolio of PHM solutions including PHM+, Asset Performance Management, Flight Risk Management through big data, AI, and analytics.
	For 155 years, the Siemens name has been synonymous with cutting-edge technologies and continuous growth in profitability. With our wide array of products, systems and services, we are world leaders in information and communications, automation and control, power, medical solutions, transportation and lighting. Sustainable success is our number one priority. Our activities focus on meeting the needs of our customers and creating value for our shareholders and employees. Our innovations—generated in our own laboratories and in cooperation with customers, business partners and universities—are our greatest strength. Siemens' global network of innovation is developing new products and services for a world that—while limited in resources—is boundless in possibilities.

PHM Conference 2019 Platinum Sponsors (continued)

	Honeywell is a Fortune 100 technology company that delivers industry specific solutions that include aerospace products and services; control technologies for buildings and industry; and performance materials globally. Our technologies help everything from aircraft, buildings, manufacturing plants, supply chains, and workers become more connected to make our world smarter, safer, and more sustainable.
PHM Conference 2019 Gold Sponsors	
	MathWorks is the leading developer of mathematical computing software. Engineers and scientists worldwide rely on its products to accelerate the pace of discovery, innovation, and development. MATLAB and Simulink are used throughout the automotive, aerospace, communications, electronics, and industrial automation industries as fundamental tools for research and development. For more information visit www.mathworks.com .
	In 1999 sparked the growth of the PC gaming market, redefined modern computer graphics, and revolutionized parallel computing. More recently, GPU deep learning ignited modern AI — the next era of computing — GPU-accelerated computing speed results in humanitarian assistance, cybersecurity, platform sustainment, autonomous systems, robotics, healthcare and more.
PHM Conference 2019 Bronze Sponsors	
	D2K Technologies (D2K) is a software solution provider dedicated to designing, implementing, testing, validating, and maintaining applications that employ model-based reasoning and machine intelligence technologies for the purposes of delivering improved situational awareness, autonomous control, and knowledge-based decision support. More specifically, the D2K Engineering team has over 30 years of domain experience applying these technologies to Autonomous Operations (AO) and Prognostics and Health Management (PHM) solutions using state of the art expert systems and model-based reasoning platforms. D2K is actively working on autonomous operations projects on behalf of DoD and NASA.
	Gastops designs and manufactures advanced equipment health monitoring products to ensure that you have real time awareness of the condition of your equipment. With 40 years experience we have developed fleet monitoring and maintenance programs which transform maintenance from the traditional scheduled or reactive maintenance, to a proactive condition-based approach.
	Global Technology Connections, Inc. has developed next-generation diagnostic/prognostic predictive tools for sustainment of critical plant, equipment and machinery. These innovative CBM/PHM products can substantially reduce the maintenance cost, increase up-time and improve safety in variety of high value assets such as Batteries, Generators, Motors, Pumps, Jet-engines and Turbo-machinery, etc.
	GPMS offers a next generation Health and Usage Monitoring System for rotorcraft. Their flagship Foresight™ product combines advanced hardware and cloud-based software to provide remote monitoring and predictive maintenance capability. GPMS gives operators the power to “know about it before it breaks, fix it before it matters.”
	QSI provides technology for equipment health diagnosis, prognosis and fault management design. QSI's TEAMS® solution identifies failing or failed components, enables dispatch of the right parts, skills and tools, and delivers optimal, context-aware troubleshooting instructions. QSI clients have achieved a threefold reduction in unscheduled downtime and diagnostics part usage.
	Since 1916, SAE has worked hand-in-hand with the aerospace community to find solutions and advance technology and certification such the globally adopted AS, AMS, ARP and AIR technical documents - becoming the world's largest, most respected aerospace standards development organization. SAE makes groundbreaking contributions to efforts in PHM and Integrated Vehicle Health Management standardization and has developed a collection of resources to further the technology development and adoption of these landmark concepts.
	Sporian Microsystems develops, markets, manufactures and sells a family of novel sensors, sensor suites, sensor-subsystems, sensor data-loggers, and wireless sensor networks for government, industrial, energy industry, utility, and original equipment manufacturers who employ sensors and wireless networks.
PHM Conference 2019 Government/Academic Contributor	
	The National Institutes of Standards and Technology (NIST) , whose mission is to promote U.S. innovation and industrial competitiveness, is actively conducting research in the field of manufacturing PHM, and specifically, delivering test methods, protocols, and tools to increase the reliability and decrease the downtime of smart manufacturing systems and processes.

PHM Society Technical Partners	
	CALCE – The Center for Advanced Life Cycle Engineering (CALCE) at the University of Maryland is a driving force behind the development and implementation of physics-of-failure (PoF) approaches to reliability, and a world leader in accelerated testing, prognostics and health management (PHM) for electronic systems, electronic part supply-chain management, and sustainment of electronic systems. CALCE consists of over 100 faculty, staff, and students engaged in research with customers that range from military and avionics to automotive, telecom, medical, and consumer electronics. www.calce.umd.edu
	The philosophy of Condition Monitoring and Diagnostic Engineering Management (COMDEM) is: Sustained Prosperity through Proactive Monitoring, Diagnosis, Prognosis and Management of all Assets. Since 1988, refereed annual international congresses and exhibitions have been successfully organized in UK, France, India, Canada, Finland, Australia, USA, Sweden, Portugal, Czech Republic, Spain, Japan, Norway. COMDEM has established and maintained its international reputation as one of the largest and most influential events of its kind. Through the publication of the International Journal of COMDEM, a number of special feature issues dealing with Quality, Reliability and Maintenance, Model-Based Diagnosis, Application of Artificial Intelligence Techniques, Intelligent Materials, Structures and Systems, Performance and Diagnosis of Rotating Machinery Systems and Components, Failure Diagnosis and Prognosis of Swedish Railway Systems, Energy and Environment, Knowledge-based Failure Diagnosis and Prognosis of Engineering Systems, Structural Health Monitoring, Failure Diagnosis and Prognosis of Mining Machinery and Systems and Estimating the Remaining Useful Life (RUL) of Industrial Assets have been published.
	Commercial Technologies for Maintenance Activities (CTMA) program, created in 1998, is a joint Department of Defense/National Center for Manufacturing Sciences effort promoting collaborative technology development, demonstration, and transition within DoD. Its objective is to ensure American troops and their equipment are ready to face any situation, with the most up-to-date and best-maintained platforms and tools available. The CTMA program has the ideal collaborative model for manufacturers, academia and DoD. We create relationships and opportunities, drive cutting edge R&D, and conduct industry intelligence from a unique perspective. Through partnerships, training, software, and business operations, CTMA can help achieve industry objectives while satisfying DoD needs through demonstration of new technologies prior to full deployment.
	Diag21 is an association that was created in 2009, at the initiative of a group of industrials Aeronautics and Defence. Its internationally oriented, is dedicated to the optimization of testability, diagnosis and prognosis (PHM) of complex systems in the areas of aerospace, land, car, rail and marine. Close to industry needs, diag21 offers exchange and service platforms.
	Established In 1948, the Helicopter Association International (www.rotor.org) is the professional trade association representing the international helicopter community. HAI's membership includes helicopter owners, operators, manufacturers, suppliers, service organizations, pilots, maintenance technicians and students. Its "Mission" is to provide its members with services that directly benefit their operations, and to advance the international helicopter community by providing programs that enhance safety, encourage professionalism and promote the unique contributions vertical flight offers society.
	The IMS Center is a leading NSF Industry/University Cooperative Research Center (I/UCRC) in the area of Prognostics and Health Management (PHM). The Center has over fifteen years of experience in developing and delivering PHM solutions for a wide-range of applications. IMS Center's mission is to enable products and systems to achieve and sustain near-zero breakdown performance, and transform maintenance data to useful information for improved productivity and asset life-cycle utilization. Since its inception, the Center has conducted over 100 successful industry and NSF supported projects, and has attracted over 80 members from all across the globe. The IMS Center was recently identified as the most economically impactful I/UCRC in NSF's recent study titled Measuring the Economic Impacts of the NSF Industry/University Cooperative Research Centers Program: A Feasibility Study. According to this study, the Center delivered its members a \$846.7 Million in combined benefits over the last ten years.
Cranfield IVHM Centre 	IVHM Center —the Integrated Vehicle Health Management (IVHM) Centre at Cranfield University in the UK—was established in 2008. It is funded by a number of large companies—Boeing, BAE Systems, Rolls-Royce, Thales and Meggitt—to work on high impact topics. The increasingly important area of IVHM technology informs existing concepts of vehicle maintenance, repair and overhaul by offering a total health check for high-tech, high-value vehicles such as aircraft, ships, high-speed trains and high performance cars.
	MFPT is a non-profit professional society with a 45-year legacy of promoting failure prevention technology. An interdisciplinary technical organization, MFPT is strongly oriented towards the practical application of health management across every engineering sphere. The MFPT community includes professional scientists, engineers, failure analysts, maintenance specialists and others who represent a wide variety of disciplines from government agencies, universities, research institutes and industry.
	Since 1916, SAE has worked hand-in-hand with the aerospace community to find solutions to its most common problems through such globally adopted AS, AMS, AIR, and ARP technical documents - becoming the world's largest, most respected aerospace standards development organization. SAE makes groundbreaking contributions to efforts in Integrated Vehicle Health Management standardization and has developed a collection of resources to further this technology and the economic advantages it offers.

IJPHM

International Journal of Prognostics and Health Management
(ISSN: 2153-2648)

EDITOR-IN-CHIEF

Abhinav Saxena, Ph.D.
GE Global Research, USA

e-mail: editor@ijphm.org

Regular Issue – Online Open Access

The International Journal of Prognostics and Health Management (IJPHM) is the premier online open access journal related to multidisciplinary research on Prognostics, Diagnostics, and System Health Management. IJPHM is the archival journal of the PHM Society.

Published papers are available for download to everyone, everywhere, without restriction, and at no cost. Authors retain the copyright to their work through the Creative Commons license, with first publication rights granted to the Journal. A key differentiator at IJPHM is fast turnaround time with decisions returned to the authors in approximately 8-12 weeks after a rigorous review. Thus, papers are published in a very short time, allowing your research to be available to the scientific community when it is most relevant.

Topics of interest

- Prognostic Algorithms and Methods
- Diagnosis and Fault Isolation Methods
- Data-Driven & Model-Based Prognostics
- PHM Sensors and Devices
- Fault-Adaptive Control Methods
- Physics of Failure Mechanisms
- Modeling and Simulations
- Uncertainty Representation & Management
- Verification and Validation
- PHM for Energy Applications
- PHM for Electronics and Components
- PHM for Power Smart Grids
- Aerospace and Defense Applications
- Industrial Applications
- Software Health Management
- PHM for Automotive Applications
- Structural Health Management
- Automated Reconfiguration
- Standards and Methodologies
- PHM System Design & Engineering
- Condition-Based Maintenance
- PHM Requirements & Specifications
- Decision Support for PHM
- Informed Logistics
- Asset Health Management
- Return-on-Investment Analysis
- Deployed PHM Applications

Let us know if you'd like to be a part of IJPHM team or have an idea for spearheading a special issue... just send us an email with your idea!

Special Issue Announcements

Apart from regular issues, special issues focus on advances in research in condition monitoring applications in specific application domains. CFPs soliciting papers are available from the journal website. A secondary goal is to document and benchmark the state-of-the-art in respective application domains.

Please checkout the website for more details and submission instructions

PHM for Aerospace	Blockchain for PHM	Human Health - II
Abstract/NOI: Oct 11, 2019	Nov 15, 2019	Nov 15, 2019
Full Submission: Jan 31, 2020	Jan 31, 2020	Mar 20, 2020
